

FL SWITCH SFNB...

Five- and Eight-Port Standard Function Ethernet Switch with Narrow Housing

Data sheet
2642_en_1

© PHOENIX CONTACT 2018-03-27

1 Description

The FL SWITCH SFNB... Factoryline switches can be used for quick and cost-effective Ethernet network expansion to the field level. Due to the narrow housing design, the switches are suitable for use in control cabinets and junction boxes. The switch supports the auto negotiation function and offers transmission speeds of 10/100 Mbps across RJ45 ports and 100 Mbps across fiber optic ports. Mixed operation for the connection of segments with different data transmission speeds is also supported.

The RJ45 ports offer an autocrossing function, which means it is not necessary to make a distinction between 1:1 and crossover cables.

Switches are available with either SC or ST multi-mode fiber optic ports. For longer distance, a single-mode fiber optic switch extends the segment to 20 km typical.

2 Features and benefits

- Increased network performance
 - Switched Ethernet networks reduce traffic and non-predictable timing
- Easy network expansion
 - No configuration of the switch
 - Auto-negotiation and autocross simplify cabling
 - Couple copper network segments with different bit rates with automatic detection of the data transmission speed of 10 or 100 Mbps.
- Easy maintenance
 - Individual LEDs at each port indicate communication activity and data rate
 - Removable power connector
 - Internal, resettable fuse
 - NS 35 DIN rail (EN 60715) compatible
- Fiber optic ports extend distance and provide electrical noise immunity
 - SC multi-mode, SC single-mode and ST multi-mode versions available
- Industrial rated
 - Rugged metal housing for industrial applications
 - -10 to 60°C operating range
 - Meets IEC 61000-6-2 electrical noise immunity
 - Meets IEC 60068-2-6 vibration test standards
 - Meets IEC 60068-2-27 shock test standards

Make sure you always use the latest documentation.

4 Technical data

General data

Function	Switch/repeater; conforms to standard IEEE 802.3
Latency of the communication processor	
FL SWITCH SFNB 5(4)TX...	8 µs plus frame time
FL SWITCH SFNB 8TX	9 µs plus frame time
Housing dimensions (width x height x depth)	
FL SWITCH SFNB 5(4)TX...	28 x 110 x 70 mm
FL SWITCH SFNB 8TX	50 x 110 x 70 mm
Weight	
FL SWITCH SFNB 5(4)TX...	205 g
FL SWITCH SFNB 8TX	291 g
Operating temperature	
All models except FL SWITCH SFNB 4TX/FX	-10°C ... 60°C
FL SWITCH SFNB 4TX/FX	0°C ... 60°C
Storage temperature	-20°C ... 85°C
Degree of protection	IP20, DIN 40050, IEC 60529
Protection class	Class 3 VDE 0106; IEC 60536
Humidity (operation and storage)	5% to 95%, no condensation
Air pressure (operation)	86 kPa to 108 kPa, 1500 m above sea level
Air pressure (storage)	66 kPa to 108 kPa, 3500 m above sea level
Mounting rail	NS 35 (EN 60715)
Preferred mounting position	Perpendicular to a standard mounting rail
Connection to protective earth ground	Snapped onto a grounded mounting rail

Supply voltage (US)

Connection type	Removable, screw-clamp connector
Wire size (solid/stranded/AWG)	0.2 to 2.5 mm ² / 0.2 to 2.5 mm ² / 24 to 12 AWG
Recommended PE wire size	2.5 mm ²
Nominal power supply	24 V DC
Permissible ripple	3.6 V _{pp} within the permissible voltage range
Permissible voltage range	
FL SWITCH SFNB 5(4)TX...	12 V DC ... 48 V DC
FL SWITCH SFNB 8TX	9 V DC ... 32 V DC
Current consumption, nominal	
FL SWITCH SFNB 5TX	180 mA@24 V DC; 340 mA@12 V DC
FL SWITCH SFNB 8TX	138 mA@24 V DC; 272 mA@12 V DC
FL SWITCH SFNB 4TX/FX	185 mA@24 V DC; 385 mA@12 V DC
FL SWITCH SFNB 4TX/FX ST	185 mA@24 V DC; 385 mA@12 V DC
FL SWITCH SFNB 4TX/FX SM20	185 mA@24 V DC; 385 mA@12 V DC
Inrush current maximum	
FL SWITCH SFNB 5TX	15 A for 35 µs
FL SWITCH SFNB 8TX	9.1 A for 40 µs
FL SWITCH SFNB 4TX/FX	7.2 A for 80 µs
FL SWITCH SFNB 4TX/FX ST	7.7 A for 80 µs
FL SWITCH SFNB 4TX/FX SM20	7.7 A for 80 µs
Test voltage	500 V DC for one minute
Protection against polarity reversal	Present

Interfaces

Total number of Ethernet interfaces (RJ45)

FL SWITCH SFNB 5TX	5
FL SWITCH SFNB 8TX	8
FL SWITCH SFNB 4TX...	4

MAC Address table Size (Entries) 1 K

Properties of RJ45 ports

Connection format	8-pos. RJ45 female connector on the switch
Connection medium	Twisted-pair cable with a conductor cross section of 0.14 mm ² to 0.22 mm ²
Cable impedance	100 Ω
Transmission speed	10/100 Mbps
Maximum network segment length	100 m

Properties of Fiber Optic ports

Connection format	SC duplex or ST female connector
Fiber type	Glass
Laser protection	Class 1 according to DIN EN 60825-1:2001-11

Properties of 100 Mbps multimode

Transmission rate	100 Mbps full duplex
Wavelength	1300/1310 nm
Fiber optic segment length	12.1 km with glass fiber 62.5/125 0.7 dB/km F1000 3.3 km with glass fiber 62.5/125 2.6 dB/km F600 7.1 km glass fiber with F-G 50/125 0.7 dB/km F1200 3.1 km glass fiber with F-G 50/125 1.6 dB/km F800

Transmission power (medium type) dynamic (average)

Minimum	-23.5 dBm (50/125 μm) / -20 dBm (62.5/125 μm)
Maximum	-14 dBm (50/125 μm) / -14 dBm (62.5/125 μm)

Transmission power (medium type) static

Minimum	-22.5 dBm (50/125 μm) / -19 dBm (62.5/125 μm)
Maximum	-14 dBm (50/125 μm) / -14 dBm (62.5/125 μm)

Receiver sensitivity

Minimum	-31 dBm (dynamic) / -31 dBm (static)
Maximum	-14 dBm (dynamic) / -14 dBm (static)

Properties of 100 Mbps single mode

Transmission rate	100 Mbps full duplex
Fiber type	9/125 μm
Wavelength	1310 nm
Maximum transmission length	25 km with glass fiber 9/125 μm 0.5 dB/km
Transmission power	
Minimum	-15 dBm
Maximum	-3 dBm
Receiver sensitivity	
Minimum	-32 dBm
Maximum	-3 dBm

Mechanical tests

Shock test according to IEC 60068-2-27

Operation: 25g, 11 ms period, half-sine shock pulse
Storage/transport: 50g, 11 ms period, half-sine shock pulse

Vibration resistance according to IEC 60068-2-6

Operation/storage/transport: 5g, 150 Hz, Criterion 3

Free fall according to IEC 60068-2-32

1 m

Conformance With EMC directives

Developed according to IEC 61000-6-2

IEC 61000-4-2 (ESD)	Contact: ± 4 kV, Criterion B Air: ± 8 kV, Criterion B
IEC 61000-4-3 (radiated-noise immunity)	10 V/m, Criterion A
IEC 61000-4-4 (burst)	Ports: ± 1 kV, Criterion B DC power: ± 2 kV, Criterion B
IEC 61000-4-5 (surge)	Ports: ± 1 kV, Criterion B DC power: ± 500 V, Criterion B
IEC 61000-4-6 (conducted noise immunity)	10 V/m, Criterion A
IEC 61000-4-8 (noise immunity against magnetic fields)	30 A/m, Criterion A
EN 55022 (noise emission)	Class A

Approvals

General

CE, RoHS EEE 2002/95/EC, WEEE 2002/96/EC

Hazardous location

Class I, Division 2, Groups A, B, C, D Temp Code T5
installed in minimum IP54 enclosure

5 Overview

Figure 1 Housing

5.1 Diagnostic and status indicators

Des.	Color	Status	Meaning
US	Green	ON	Supply voltage US in the tolerance range
		OFF	Supply voltage US too low

5.2 Data transmission speed LEDs (2 LEDs/port)

	10 Mbps	100 Mbps
LNK/ACT	ON/blinking	ON/blinking
100	OFF	ON

LNK/ACT LED:

ON: indicates an electrical link

Flashing: indicates network traffic (at high data rates the blinking is in a constant rate)

6 Installation

CAUTION:

Only qualified personnel may start up and operate this device. Qualified personnel are persons authorized to start up, ground and mark devices, systems, and equipment according to the standards of safety technology.

NOTE:

The FL SWITCH SFNB... module is designed for SELV and PELV operation according to IEC 61140/EN 61140.

Install the FL SWITCH SFNB... on a clean mounting rail. To avoid contact resistance only use clean, corrosion-free mounting rails that meet the EN 60715 standard. End clamps can be mounted on both sides of the module to stop the modules from slipping on the rail.

NOTE:

Connect the mounting rail to protective earth ground using a grounding terminal block. The modules are grounded when they are snapped onto the rail. Connect protective earth ground with low impedance.

6.1 Assembly

1. Place the module onto the rail from above. The upper holding keyway must be hooked onto the top edge of the rail.
2. Push the module from the front towards the mounting surface.
3. Once the module has been snapped on properly, check that it is fixed securely on the rail.

6.2 Removal

1. Insert a suitable tool (e.g., needle-nose pliers) into the arresting latch and pull it down.
2. Pull the module slightly away from the mounting surface.
3. Lift the module from the rail.

6.3 Power connection

The switch is designed for SELV and PELV operation at +24 V DC according to IEC 61140/EN 61140. Only SELV and PELV according to the defined standards may be used for supply purposes.

Snapping the switch onto a grounded mounting rail connects it to the ground potential. In an environment particularly prone to EMI, noise immunity can be increased

by an additional low-impedance connection to functional earth ground (see Figure 2).

Figure 2 Power connections

Use power conductors between 0.2 - 2.5 mm² (24 - 12 AWG). Torque connection screws to 0.5 - 0.6 Nm (5 - 7 lb-in.).

6.4 Ethernet interface

The FL SWITCH SFNB... has either five or eight Ethernet ports on the front in RJ45 format to which only twisted-pair cables with an impedance of 100 Ω can be connected. The data transmission speed is 10/100 Mbps. In addition, every port has an auto crossing function: it is not necessary to make a distinction between 1:1 or crossover Ethernet cables.

Figure 3 RJ45 pin assignment

6.5 Fiber Optic connection

Two different types of fiber optic connection are available.

- The ST connectors are typically individual round connectors and use a 1/4-turn connection.
- The SC connectors have a square interface and the “conductors” are typically locked together through the connector.

SC Connectors

ST Connectors

Figure 4 Fiber optic ports

When installing three or more switches utilizing the fiber ports in high ambient temperature environments, allow a minimum of 5 mm spacing between the switches for increased cooling.

Figure 5 Housing dimensions

7 Switching characteristics

– Store and Forward

All data telegrams received by the switch are saved and their validity checked. Invalid or faulty data packets (> 1522 bytes or CRC errors) and fragments (< 64 bytes) are rejected. Valid data telegrams are forwarded by the switch. The switch always forwards the data using the data transmission speed that is used in the destination network segment.

– Multi-Address function

The switch independently learns the addresses for termination devices, which are connected via a port, by evaluating the source addresses in the data telegrams. Only packets with unknown addresses, with a source address of this port or with a multicast/broadcast address in the destination address field are forwarded via the corresponding port. The switch can store addresses in its address table with an aging time of 5 minutes. This is important when more than one termination device is connected to one or more ports. In this way, several independent subnetworks can be connected to one switch.

A restart deletes the entire address table.
