

PowerLogic  
**Easergy P3**

Catalog 2021  
Network Protection Relays

**Note:** Electrical power systems are dangerous, protection relays are defined and governed by international standards such as IEC 60255 “Measuring relays and protective equipment” and IEEE C37.97 “Protective relay applications to power systems buses”. Never attempt to install or operate protection relays or associated equipment without the necessary qualifications, training and tools. Exposure to electrical arc-flash incidents can be life threatening, no situation can ever be deemed fully safe. Standards such as NFPA 70E define important risk categorization and such standards identify both distance from, and energy of the arc incident to be important factors. In order to reduce the risk category and improve safety during arc-flash incidents, functionality is available in Easergy P3 protection relays to: i) to operate electrical panel from a safer distance via wireless communication, and ii) arc-flash protection functionality to detect and limit the arc energy by tripping the connected circuit breaker faster than in a conventional protection scheme.

**Notice:** This Catalog is for illustration purpose only. All connections mentioned in this document must be made as instructed in the User Manuals.

# General Contents

Range description	6
Easergy P3 Standard	32
Easergy P3 Advanced	52
Easergy digital experience	82
Additional modules and accessories	92

Ordering	112

# Take the Easergy P3 further with EcoStruxure

EcoStruxure, Schneider Electric's IoT-enabled, open and interoperable architecture and platform, brings together Connected Products, Edge Control, and Apps, Analytics & Services. EcoStruxure connected products deliver enhanced value around safety, reliability, efficiency, sustainability, and connectivity.

450 000

EcoStruxure systems deployed since 2007 with the support of our 9,000 system integrators

## EcoStruxure ready

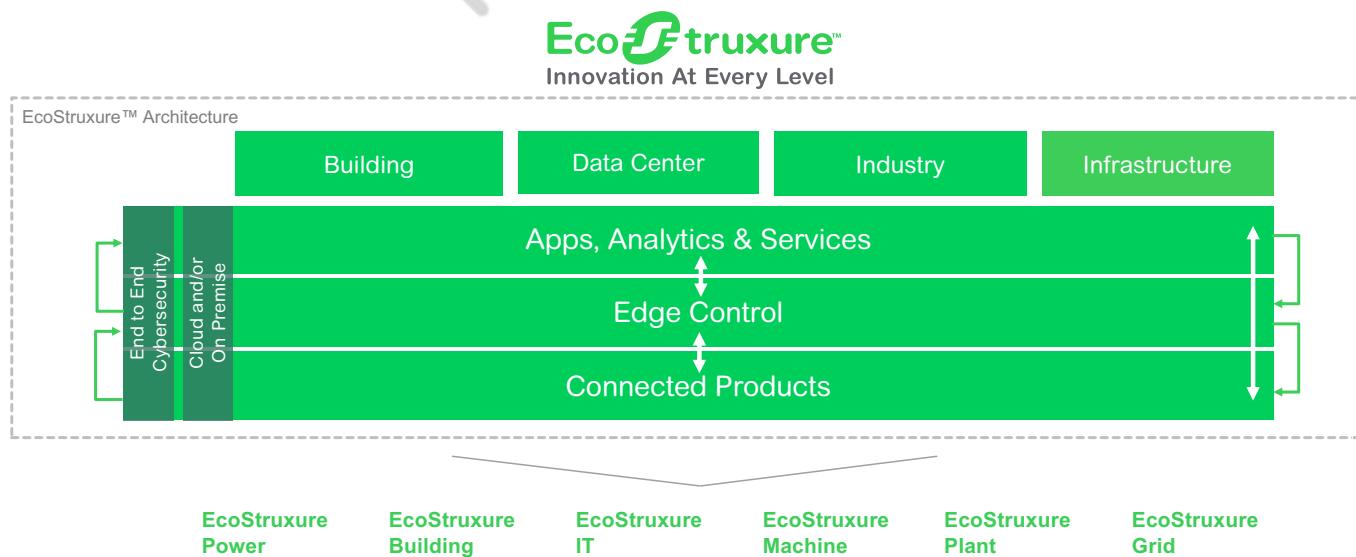

**Efficient asset management**  
Boost your efficiency and reduce downtime using predictive maintenance tools

**24/7 connectivity**  
Make better informed decisions with real-time data that's available everywhere, anytime

**Enhanced safety**  
Advanced features designed-in based on well-known designs, experience and technology

# Easergy P3 at a glance

## What is Easergy P3?

Easergy P3 is a complete range of protection relays for medium voltage applications, including feeder, motor, transformer, and generator protection. It embeds all the latest communication protocols on serial or Ethernet links.

Based on more than 100 years of experience in network protection relays, Easergy P3 benefits from the reliability of Sepam, MiCOM and Vamp.

Unparalleled  
Efficiency

Better  
Connectivity

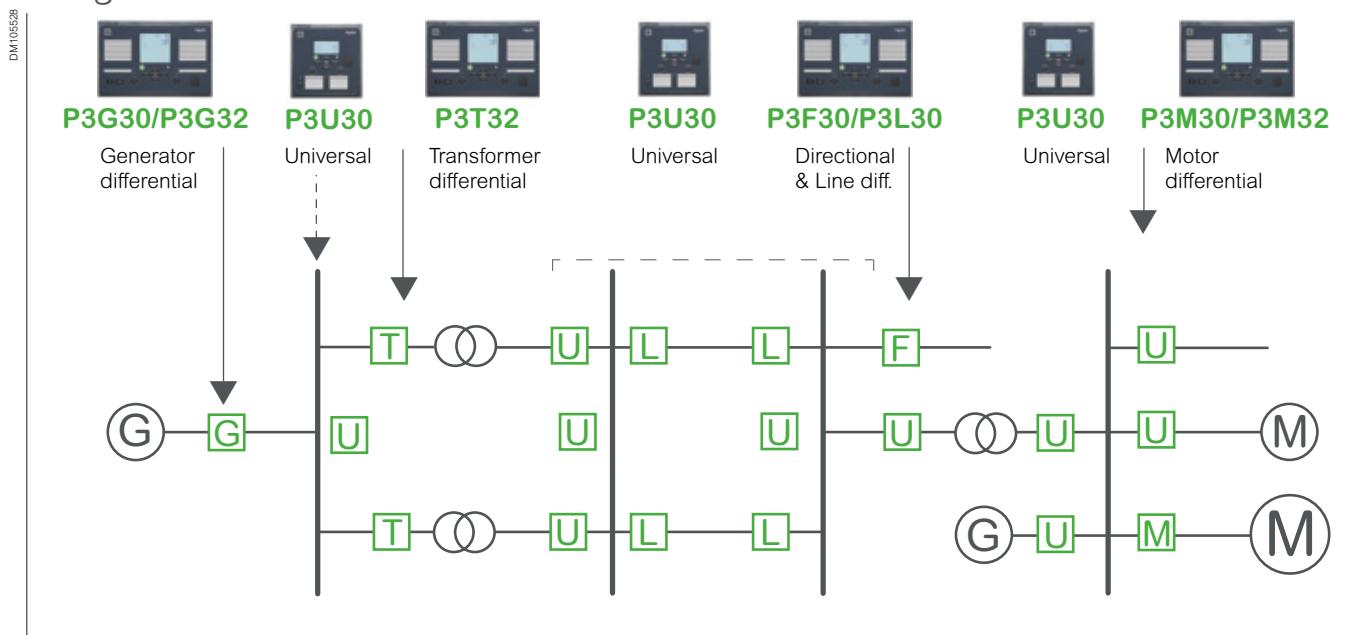

Enhanced  
Safety

- Simple selection and ordering with EcoReal MV
- Simplified configuration with the new eSetup Easergy Pro setting tool
- Faster delivery with on-the-shelf availability of standard configurations

- Simpler operation and maintenance with the EcoStruxure™ Power Device app
- 9 communication protocols in one box, including IEC 61850
- Increased number of inputs and outputs for more possibilities

- Embedded arc protection
- Built-in virtual injection testing
- Compliant with international standards (i.e. IEC 60255-1)

Easergy P3 Standard

PM106574

Easergy P3 Advanced

Easergy P3 is a family of digital protection relays for distribution networks dedicated to:

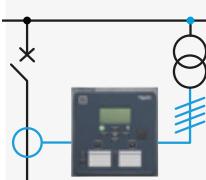

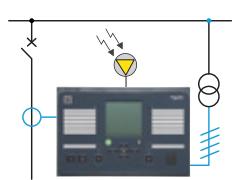

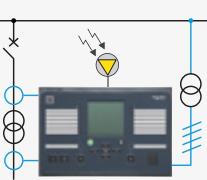

- **Buildings and Industry:**
  - Retail
  - Hotels
  - Healthcare
  - Education and research
  - Transportation
  - Industrial buildings
  - Data Center
- **Utilities - Energy distribution**
- **Large sites:**
  - Oil and Gas
  - Mining
  - Mineral and Metals
  - Water

Easergy P3 protection relay is based on proven technology concepts and developed in close cooperation with customers, so it's built to meet your toughest demands. It's available in two sizes to best fit your needs:

- The Easergy P3 Standard combines protection functions such as directional earth fault for feeder and motor protection in a one-box solution.
- The Easergy P3 Advanced features a modular design that allows user-defined conventional protection and arc flash protection solutions in both new and existing power distribution systems.

Easergy products are designed to be user friendly, a feature that is proven in our customer reports day after day. You'll benefit from features that include:

- A complete set of protection functions, related to the application
- Arc detection (Easergy P3 Advanced)
- Dedicated circuit breaker control with single-line diagram, push buttons, programmable function key and LEDs, and a customizable alarm
- Multilingual HMI for customized messaging
- Settings tool relay management software for setting parameters, configuring, and network fault simulation
- Both serial and Ethernet communication, including redundancy
- IEC 61850 standard Ed.1 & Ed.2

<b>Easergy P3 contains</b>				
Two main devices, each with specific functions to address your needs in a one-box design, regardless of application.

# Selection guide by application

## Arc flash application

### Busbar arc protection

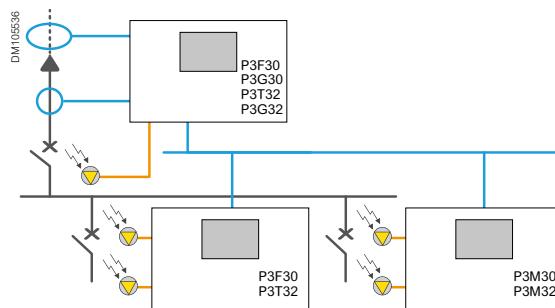

- Arc protection, activated by overcurrent and light signals, or light signals alone

#### Centralized busbar arc protection

- Up to 4 light point sensors to monitor the busbar

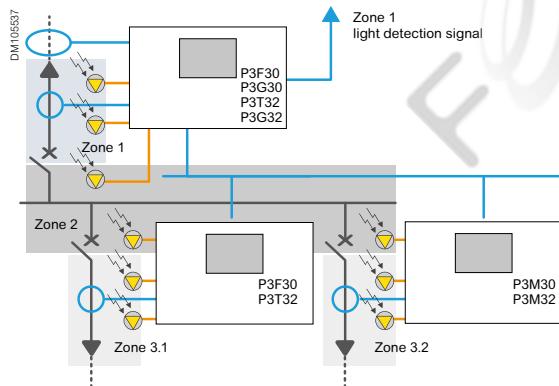

#### De-centralized busbar arc protection

- Up to 4 light point sensors in each relay
- Transmission of light detection signals via digital I/O or IEC 61850 GOOSE messages

### Zone arc protection

- Up to 8 arc protection stages in each relay

- Light detection in zone 1:  
signal sent to upstream relay for tripping
- Light detection in zone 2:  
incomer Easergy P3 trips, if fault confirmed by overcurrent
- Light detection in zone 3:  
corresponding outgoing Easergy P3 trips, if fault confirmed by overcurrent

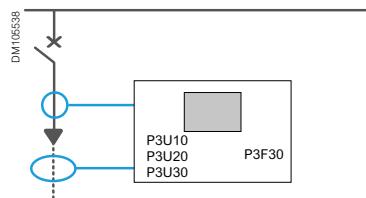

# Selection guide by application

## Feeder/incomer application

### Outgoing protection

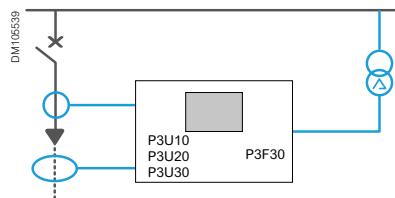

- Feeder overcurrent protection
- Feeder overload protection

**Protection of low-capacitance feeders in impedance-earthed or solidly-earthed neutral systems**

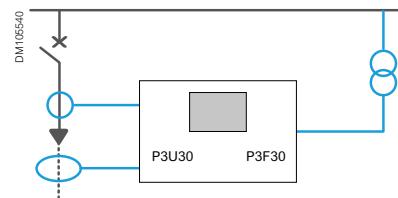

- Feeder earth-fault overcurrent

**Protection of high-capacitance feeders in impedance-earthed or compensated or isolated neutral systems**

- Directional earth-fault overcurrent
- Transient intermittent earth-fault

**Protection of feeders with metering**

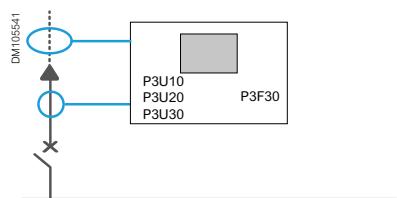

- Power and energy measurement
- Min and max demand values over the last 31 days and 12 months

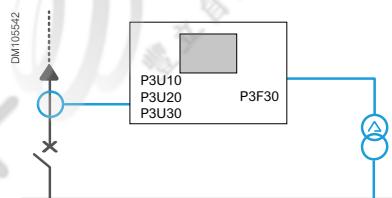

### Incomer protection

- Busbar overcurrent protection

**Incomer protection without voltage monitoring**

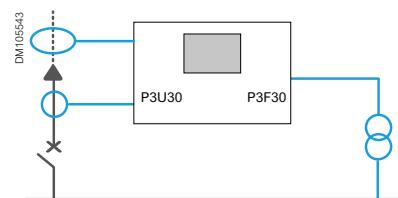

- Earth-fault overcurrent

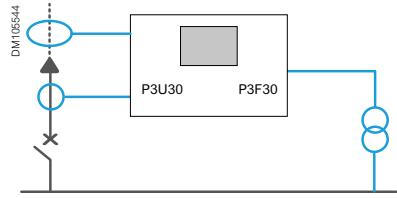

- Neutral voltage displacement protection for isolated system

**Incomer protection with voltage and frequency monitoring**

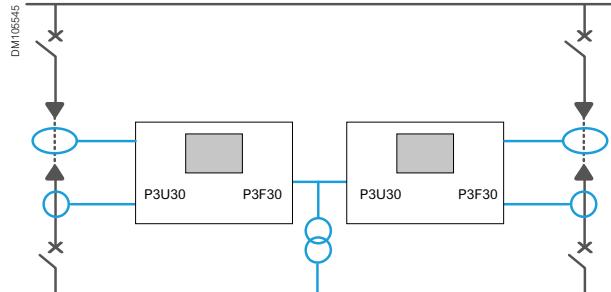

- Under/over voltage
- Frequency, rate of change of frequency

**Incomer protection with power quality monitoring**

- Voltage and frequency min and max values
- Voltage harmonic values and THD
- Voltage sags and swells

**Parallel incomer protection**

- Directional phase overcurrent
- Directional earth-fault overcurrent

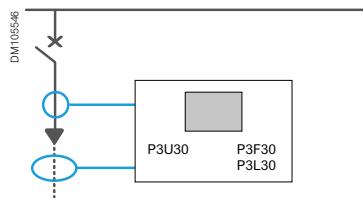

# Selection guide by application

## Feeder/incomer application

### Line protection

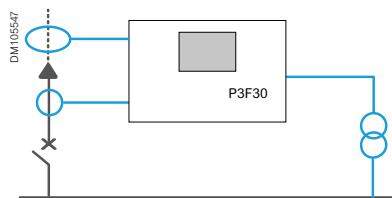

- Overcurrent and earth-fault protection (directional and non-directional)
- Feeder overload protection

#### Overhead line protection

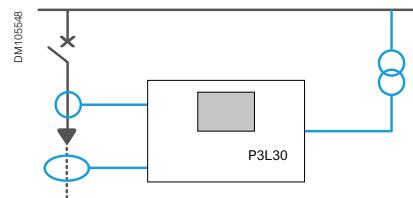

- Recloser
- Feeder fault locator

#### Incomer protection with fault locator

- Incomer fault locator

#### Line protection with line differential and distance functions

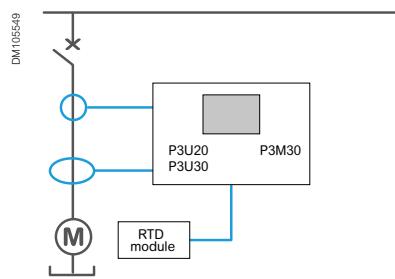

- Line differential protection
- Distance protection

## Motor application

**Motor protection**

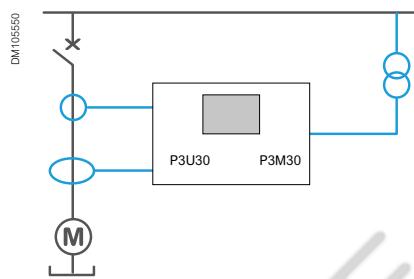

- Motor overcurrent and earth-fault overcurrent
- Thermal overload
- Motor start-up supervision
- Motor restart inhibition

## Motor protection without voltage monitoring

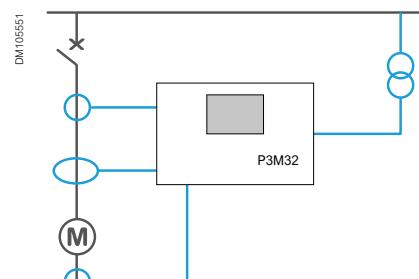

- Temperature measurement (stator, bearings)

## Motor protection with voltage monitoring

- Undervoltage protection

## Motor protection with differential function

- Differential protection

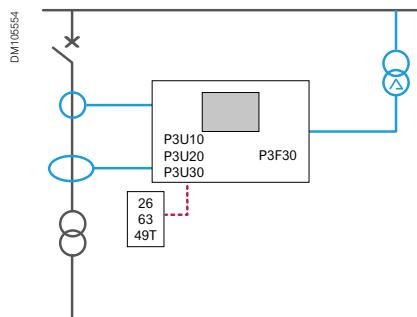

# Selection guide by application

## Transformer application

### Transformer feeder protection

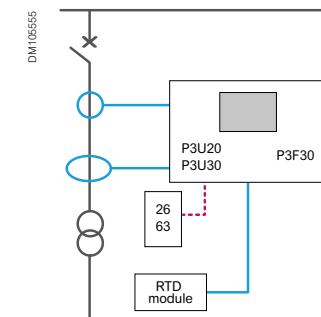

- Transformer overcurrent and earth-fault overcurrent protection
- Thermal overload protection
- External trip from thermostat/Buchholz

#### Transformer feeder protection

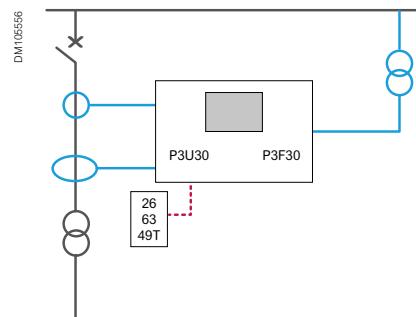

- Directional earth-fault overcurrent for impedance earthed or compensated neutral systems

#### Transformer feeder protection without voltage monitoring

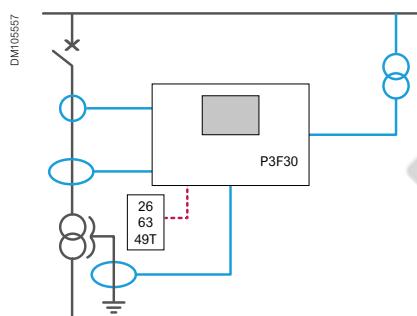

- Temperature measurement (ambient, oil)

#### Transformer feeder protection with voltage monitoring

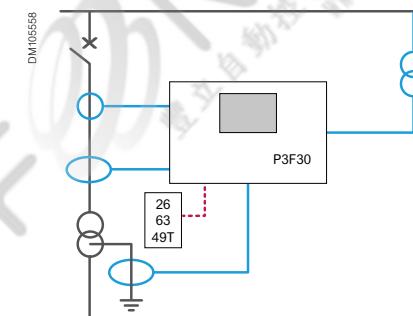

- Over and undervoltage protection

### Transformer feeder protection with additional current measurement

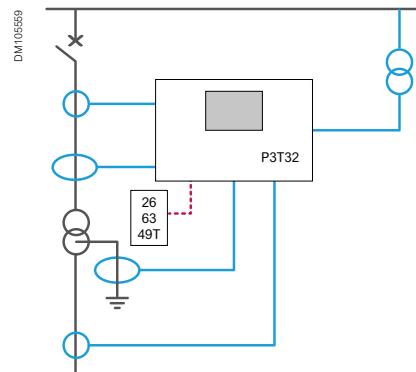

- Tank earth-leakage protection

- Earth-fault overcurrent on the secondary side

### Transformer feeder protection with differential function

- Differential protection
- Restricted earth-fault protection (high impedance)

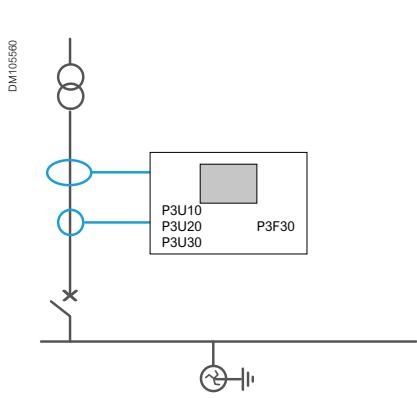

# Selection guide by application

## Transformer application

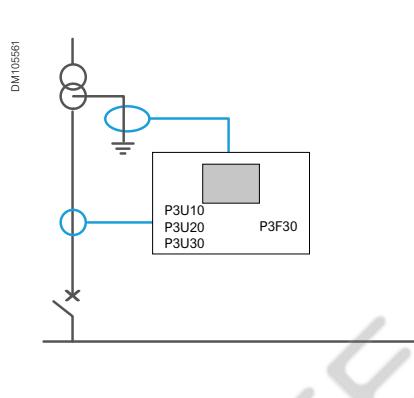

### Transformer incomer protection

- Busbar overcurrent protection
- Inter-trip from primary CB protection

#### Transformer incomer protection without voltage monitoring

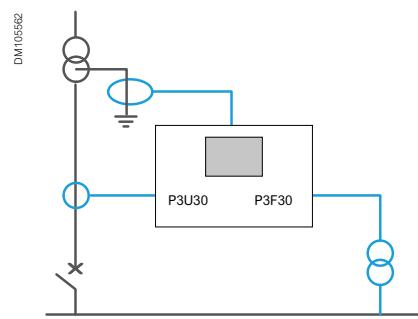

- Transformer earth-fault overcurrent

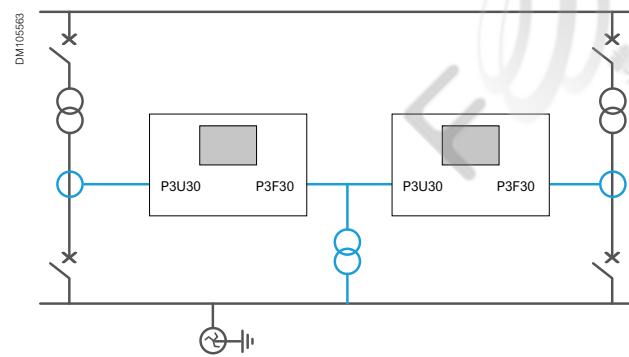

- Earth-fault overcurrent for transformer and back-up protection

#### Transformer feeder protection with voltage monitoring

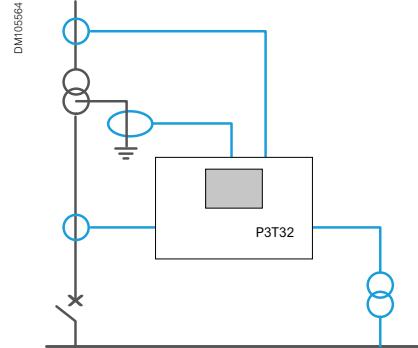

- Over and undervoltage protection
- Power and energy measurement
- Min and max demand values over the last 31 days and 12 months

#### Parallel transformer incomer protection

- Directional phase overcurrent

#### Transformer incomer protection with differential function overcurrent

- Transformer differential overcurrent
- Restricted earth-fault overcurrent (high impedance)

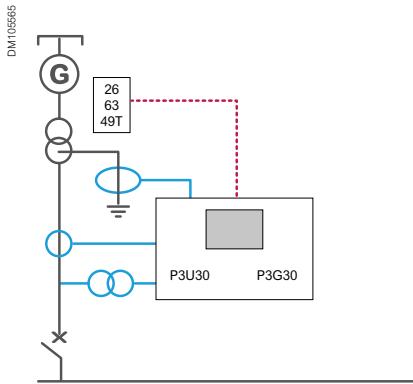

# Selection guide by application

## Generator application

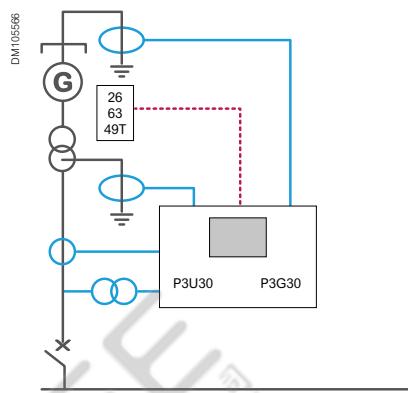

### Small generator transformer unit protection

- Overcurrent protection of the supplied network
- Voltage and frequency monitoring
- External trip from thermostat/Buchholz

Protection of a stand-alone generator-transformer unit

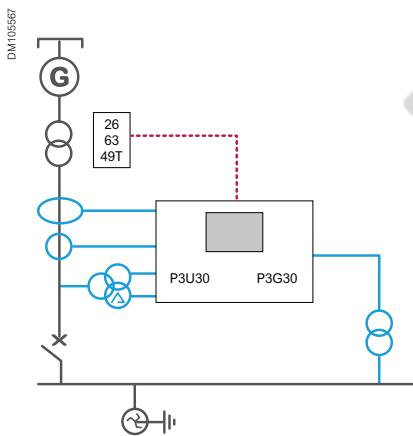

- Earth-fault overcurrent protection of the supplied network  
Note: monitoring of generator insulation must be ensured by another device

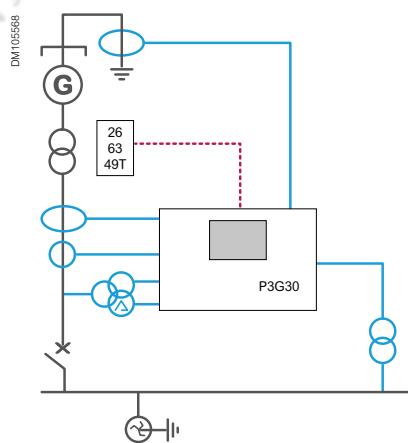

- Earth-fault overcurrent protection of the generator
- Earth-fault overcurrent protection of the supplied network

### Protection of a generator-transformer unit coupled to another source

- Earth-fault overcurrent protection of the transformer
  - Neutral voltage displacement to detect transformer earth-fault when CB is open
  - Synchro-check
- Note: monitoring of generator insulation must be ensured by another device

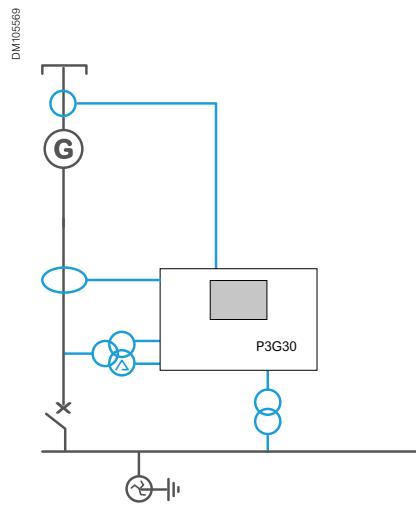

- Earth-fault overcurrent protection of the generator and the transformer
- Neutral voltage displacement to detect transformer earth-fault when CB is open
- Synchro-check

## Generator application

### Mid-size generator protection

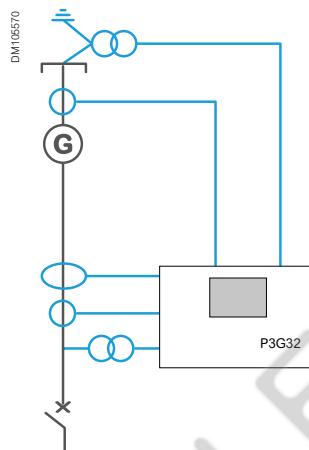

- Under-impedance
- Loss of field
- Voltage and frequency monitoring

Protection of a generator coupled to another source

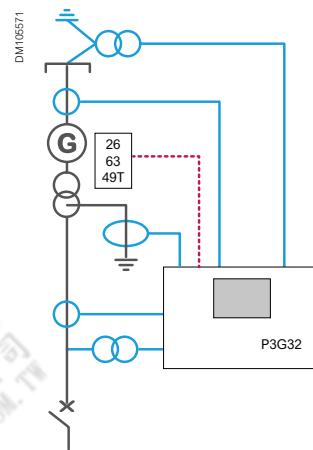

- Earth-fault overcurrent protection of the generator when coupled
- Neutral voltage displacement to detect generator earth-fault when CB is open
- Synchro-check

### Generator protection with differential function

- Stator earth-fault detection
- Differential protection

### Generator-transformer unit protection with differential function

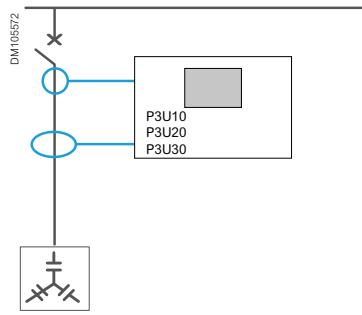

- Stator earth-fault detection
- Differential protection
- Restricted earth-fault protection (high impedance)

## Capacitor application

### Capacitor bank protection

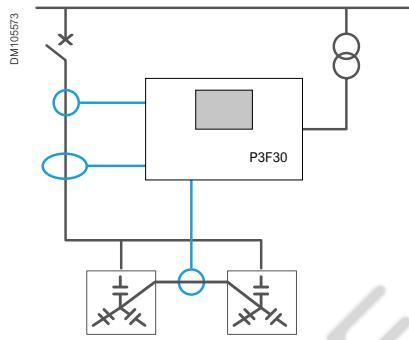

- Capacitor bank overcurrent and earth-fault protection
- Capacitor bank overload protection

Capacitor bank protection without voltage monitoring

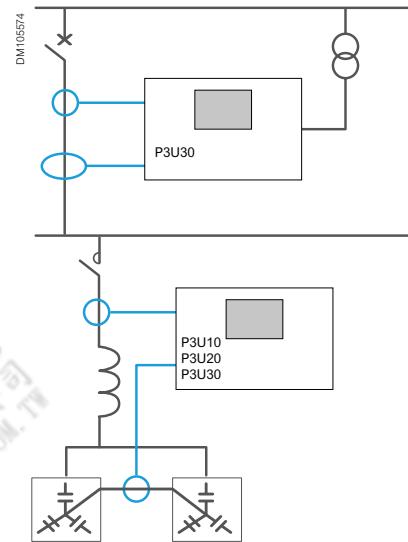

- Capacitor overvoltage protection, based on current measurement and harmonics
- Current harmonic values and THD

Capacitor bank protection with voltage monitoring

- Capacitor bank unbalance
- Overvoltage
- Current and voltage harmonic values and THD

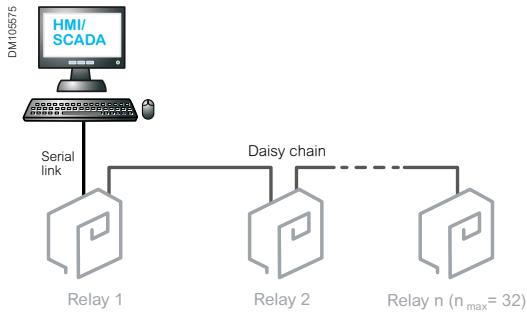

Protection of harmonic filters

- Overvoltage
- Capacitor bank unbalance
- Capacitor overvoltage protection, based on current measurement and harmonics
- Current harmonic values and THD

# Communication

## SCADA system

### Connection to SCADA using serial line

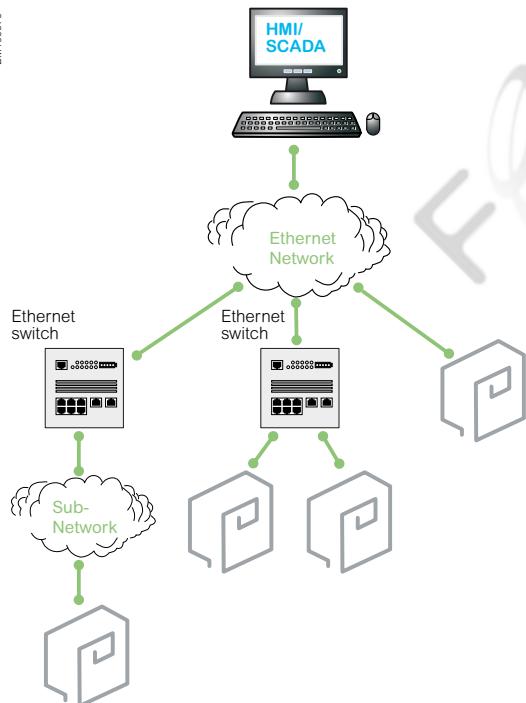

This architecture allows you to connect HMI/SCADA to a set of Easergy protection relays using a multi-drop serial communication link with master-slave communication.

#### Available protocols:

- Modbus RTU
- IEC 60870-5-101
- IEC 60870-5-103
- DNP3
- Profibus
- SPAbus

#### Time synchronisation protocol:

- IRIG-B
- Minute pulse

### Connection to SCADA using Ethernet

This architecture allows you to connect a set of Easergy protection relays directly to an Ethernet network.

#### Available protocols:

- IEC 61850
- IEC 60870-5-101
- DNP3
- Modbus
- EtherNet/IP

Note: It is possible to mix on the same Ethernet network the IEC 61850 protocol with any of the 4 other protocols.

This allows you to use the GOOSE messages between relays together with another protocol for communication to SCADA.

It is also possible to connect an Easergy relay to 2 different control systems, using the same Ethernet communication port and IEC 61850 protocol for one of them and any available protocol for the other one.

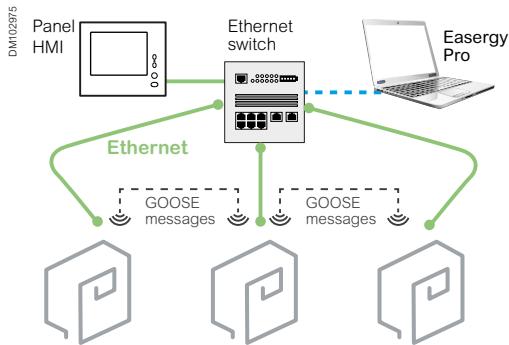

The Easergy P3 relay handles the IEC 61850 station bus, in compliance with standards IEC 61850-6, 7-1, 7-2, 7-3, 7-4 and 8-1 Ed.1 or Ed.2, according to configuration.

#### Other available Ethernet protocols:

- FTP for file transfer
- SNTP for time synchronization
- HTTP for web server

# Communication

## Example of communication

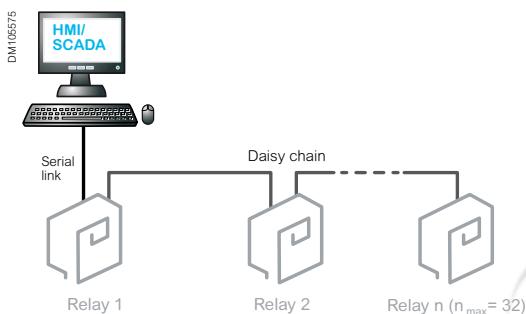

### Architecture example 1

#### Switchboard internal network

This architecture allows fast GOOSE communication between Easergy protection relays of the switchboard, thus avoiding costly wiring. Typical uses are logic discrimination, load shedding, etc.

In addition, a panel HMI featuring a web browser can be used to monitor and control the entire switchboard.

A spare connection on the panel Ethernet switch can also be provided for connecting the Easergy Pro.

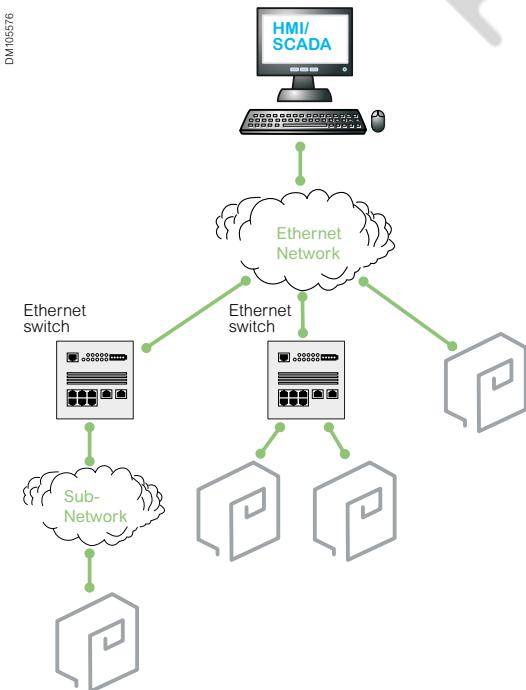

### Architecture example 2

#### Connection to SCADA using serial lines and legacy protocols

This architecture allows you to connect HMI/SCADA to a set of Easergy protection relays using a multi-drop serial communication link with master-slave communication protocols such as Modbus-RTU, DNP3, or IEC 61870-5-103.

The RS485 serial communication port of the Easergy protection relay enables simple daisy chaining wiring thanks to its 2 RJ45 connectors, suited for 2-wire or 4-wire cabling. A termination module is plugged into the last connection. As an alternative, the fiber optic serial communication port can be used.

### Architecture example 3

#### Connection to HMI/SCADA using Ethernet with redundant paths

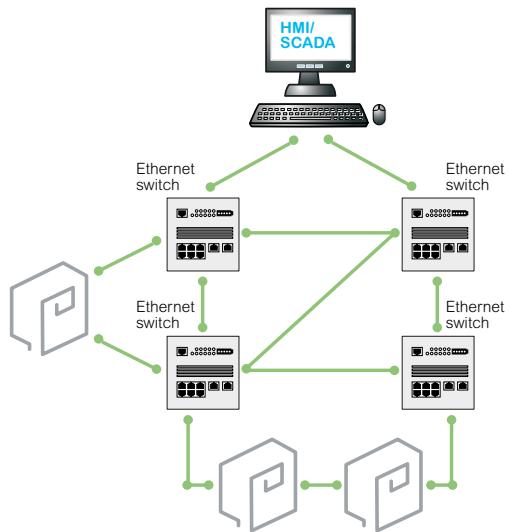

When using an Ethernet infrastructure for the system network, redundant paths are often created. This is usually a deliberate action to improve communication availability, but can also result from non-mastered and overly complicated network architectures.

Redundant paths, however, can result in loops that are not compatible with normal Ethernet operation because they permit frames to propagate endlessly, inducing a phenomenon known as "frame storm." Using such network topologies therefore requires the use of special management techniques.

# Communication

## SCADA system

DM105577

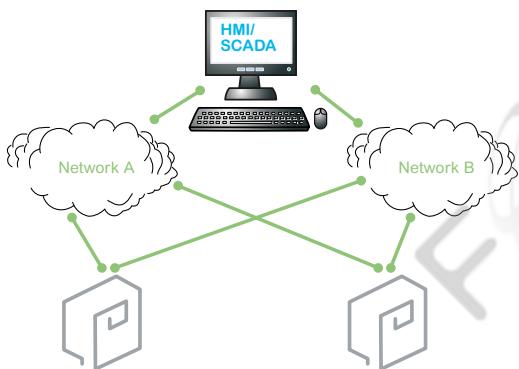

### RSTP (Rapid Spanning Tree Protocol)

The principle of RSTP is to virtually cut all links that are not necessary at a given time, changing the meshed topology into a tree topology.

The main advantage of RSTP is that it is widespread and works on any network topology. On the other hand, RSTP takes seconds to reconfigure the network in case of network interruption.

Do not connect more than 10-15 relays in one RSTP loop.

DM105578

### PRP (Parallel Redundancy Protocol)

The principle of PRP is to transmit frames in parallel on two independent network infrastructures: A and B.

The receiving device is in charge of eliminating the redundant frame if it is received.

PRP features a 0 ms recovery time in case of lost of failed frame.

PRP is supported by Easergy P3 relays.

## Engineering system and System configuration

### Engineering system

#### eSetup Easergy Pro

eSetup Easergy Pro can be connected to a single Easergy protection relay on the front USB port or to a group of Easergy protection relays via Ethernet.

eSetup Easergy Set allows you to prepare the configuration of the relay without having any physical relay. For this purpose, eSetup Easergy Pro provides the latest version of the configuration description file directly from the web.

#### EcoStruxure™ Power Device app

EcoStruxure™ Power Device app can be connected to the Easergy protection relays using a WiFi router.

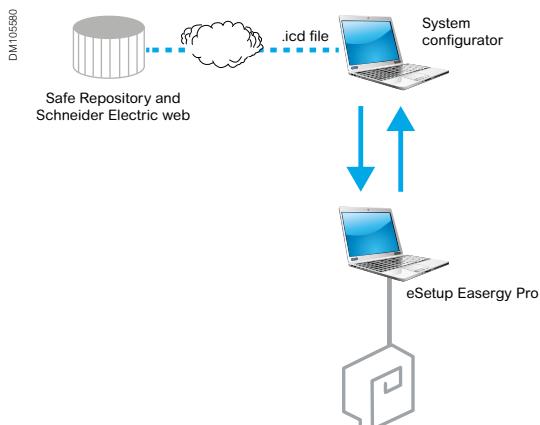

EcoStruxure™ Power Device app is also connected to the safe repository, allowing you to access todocuments and store files downloaded from the relay.

#### Easergy web-HMI

In addition to eSetup Easergy Pro, most of the resources of the relay can be accessed with a standard web browser, using the web pages embedded into the relay.

### System configuration according to IEC 61850

The methodology described in IEC 61850-6 standard can be applied with Easergy protection relays to build a protection and control system based on this standard.

#### .icd file

When the configuration of an Easergy protection relay is done, setting tool can generate IED capability file. This file can be used by the system configurator.

# Communication

Arc flash protection system  
by network communication

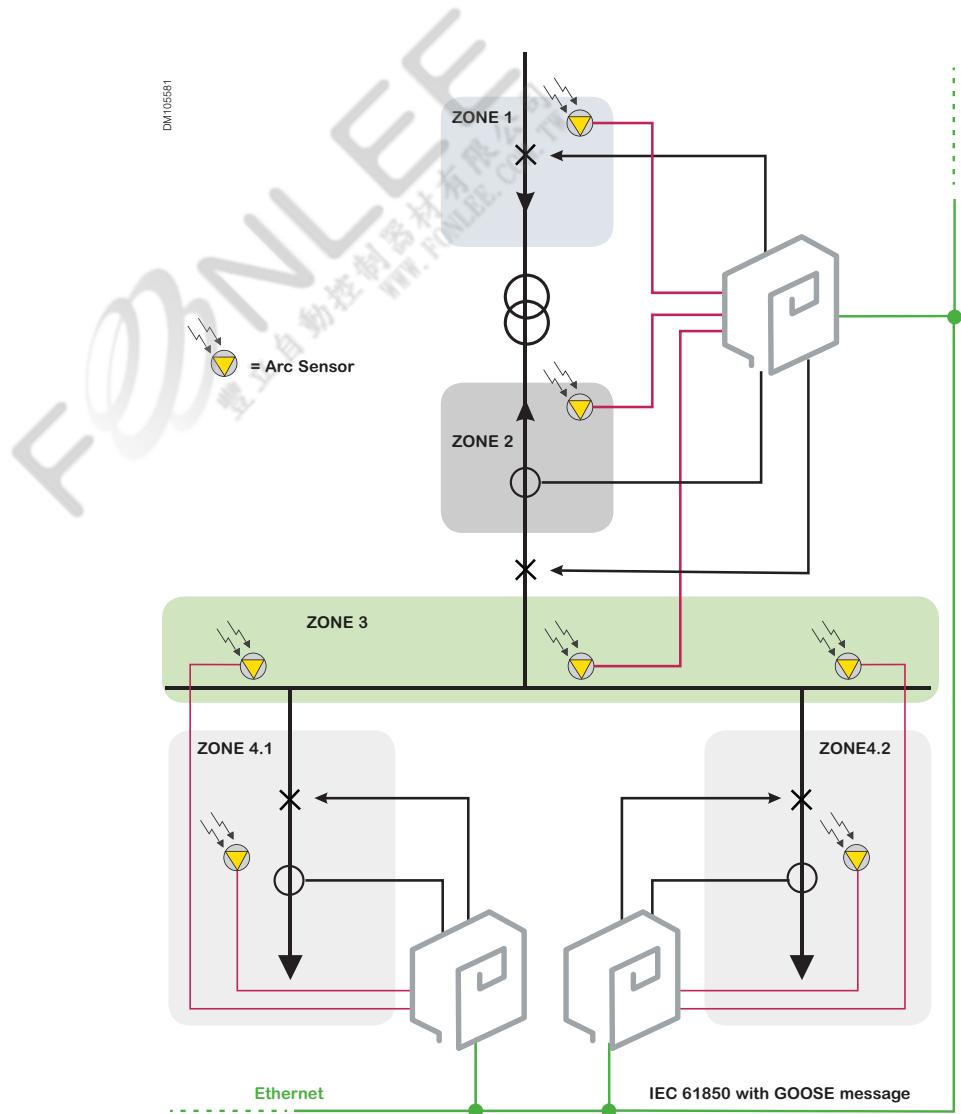

## Arc flash protection system: Application example

In this application example, the arc flash sensor for zone 4.1 is connected to Device 1. If the arc flash sensor awakens and simultaneously Device 3 sends a current signal, the zone 4.1 is isolated by the outgoing feeder breaker.

The arc flash sensor for zone 4.2 is connected to Device 2 and operates the same way.

The arc flash sensors for zone 3 are connected to Device 1, 2, or 3. If a sensor awakens in zone 3, the light-only signal is transferred to Device 3, which then trips the main circuit breaker.

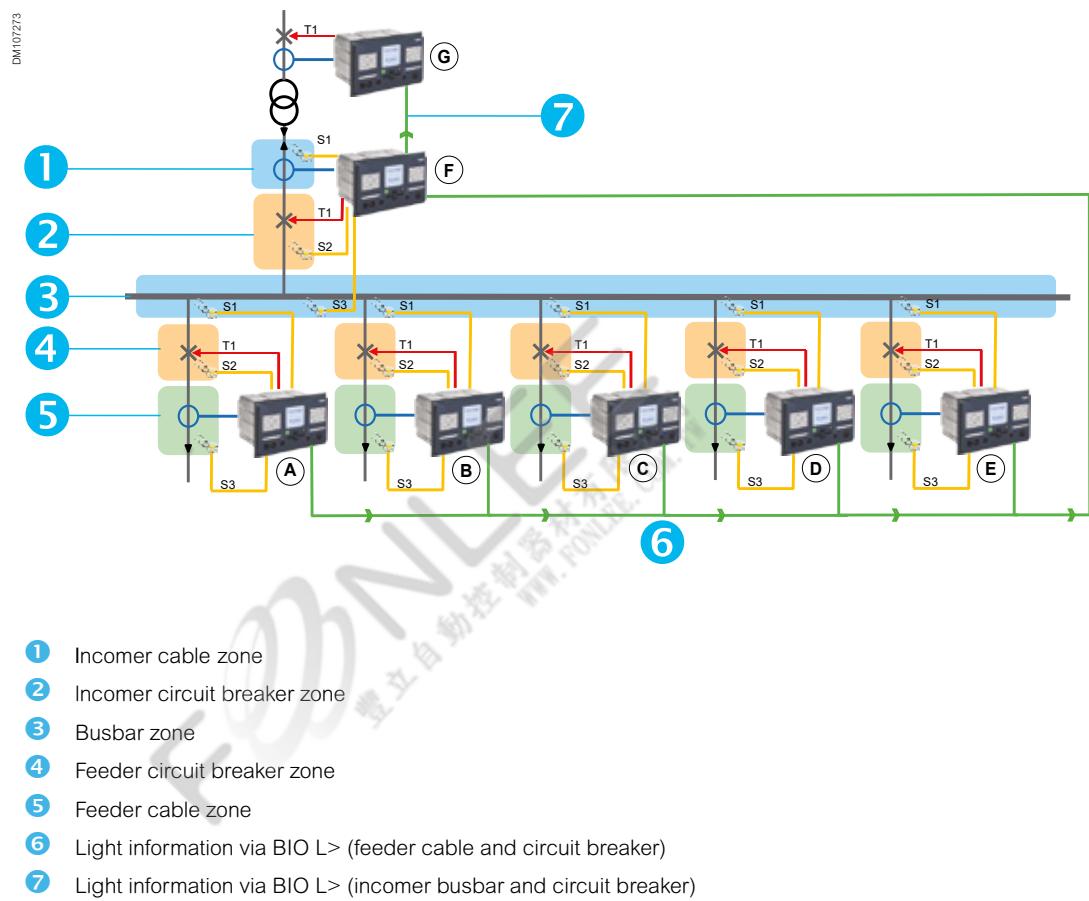

An eventual arc flash fault in zone 1 or 2 does not necessarily activate the current element in Device 2. However, arc detection can be achieved by using the light-only principle. If an arc flash occurs in cable termination, zone 1, or zone 2, the fault is cleared by the upstream circuit breaker.

# Application

## Arc flash detection application

### Arc flash detection application example IEC

- 1** Incoming cable zone
- 2** Incoming circuit breaker zone
- 3** Busbar zone
- 4** Feeder circuit breaker zone
- 5** Feeder cable zone
- 6** Light information via BIO L> (feeder cable and circuit breaker)
- 7** Light information via BIO L> (incomer busbar and circuit breaker)

In this application example, the arc flash sensor for zone **5** is connected to device **A**. If the sensor detects a fault and simultaneously, device **A** detects an overcurrent signal, zone **5** is isolated by the outgoing feeder breaker.

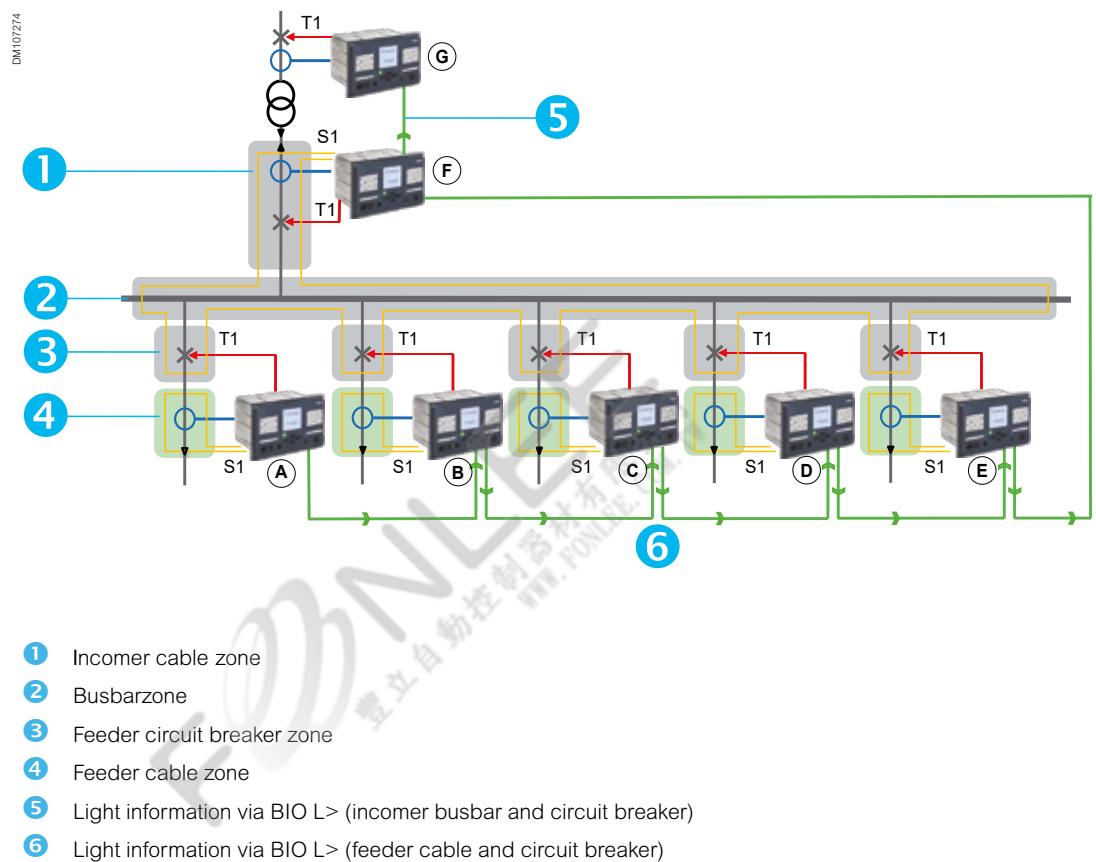

The arc flash sensor for the second feeder zone **5** is connected to device **B**, and it operates the same way. The arc flash sensors for zones **3** and **4** are connected to device **A**, **B**, **C**, **D**, **E** and **F**. If a sensor detects a fault in zone **3** or **4**, the light-only signal is transferred to device **F** which also detects the overcurrent and then trips the main circuit breaker.

An arc flash fault in zone **1** or **2** does not necessarily activate the current detection in device **F**. However, arc flash detection can be achieved by using the light-only principle, or alternatively, the light detection signal can be transferred to device **G**. If an arc flash occurs in the cable termination or incomer circuit breaker in zone **1** or **2**, the fault is cleared by an overcurrent signal.

# Application

## Arc flash detection application

### Arc flash detection application example IEC with Fiber

The fiber-loop arc flash sensor for zone ⑤ is connected to device **A**. If the sensor detects a fault and simultaneously, device **A** detects an overcurrent signal, zone ⑤ is isolated by the outgoing feeder breaker.

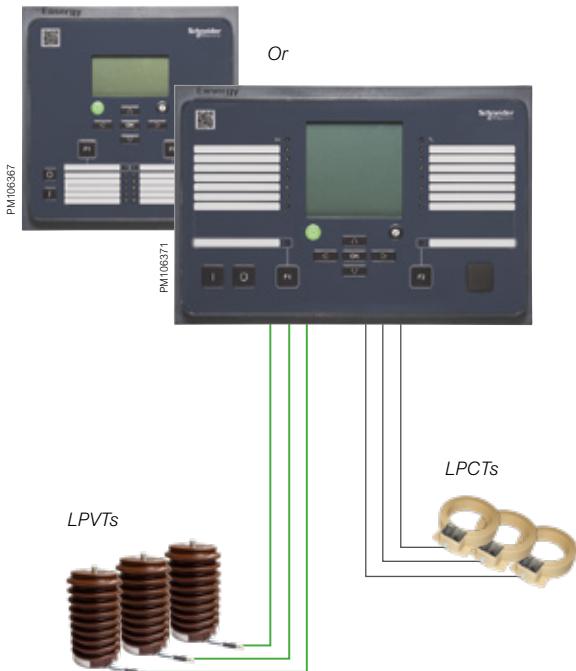

For the other feeders, the fiber-loop arc flash sensors monitoring zone ⑤ are connected to the appropriate feeder relays and they operate the same way as feeder **A**.

The fiber loop arc flash sensors for zones ③, ② and ① are connected to device **F**. If a sensor detects a fault in zone ③, ② or ① and simultaneously, device **F** detects an overcurrent signal, the fault is cleared by the incoming breaker operation.

Device **G** measures the overcurrent and receives light detection signals from zones ①, ②, and ③. It trips the substation if device **F** is unable to measure the overcurrent.

# Application

## Connections with sensors

*LPCT and LPVT connection to  
Easergy P3U30, P3F30, P3L30 and P3M30 protection relays*

### Compatibility with low power sensors LPCT/LPVT...

Easergy P3 relays can be ordered with either a conventional CT/VT measuring module or with a low-power CT/VT measuring module, compatible with low-power sensors compliant to IEC 61869-10 and IEC 61869-11 standards.

Easergy P3 protection relays can work with both resistive divider and capacitive divider LPVTs.

**Low Power Current Transformer (LPCT)** is a magnetic sensor with integrated shunt providing a voltage output (mV) which represents the primary current (A). LPCTs provide a low voltage output signal compatible with Easergy P3 protection relays.

**Low Power Voltage Transformer (LPVT)** is a voltage sensor based on resistor dividers for digital protection and measuring devices. LPVTs provide a low voltage output signal compatible with Easergy P3 protection relays.

The LPCT/LPVT compatibility of Easergy P3 allows users to move from conventional instrument transformers to better low power sensors technology which brings a variety of benefits at every stage of the project and throughout the whole life cycle of your installation.

### ...for more reliability...

Low power sensors are free of ferroresonance and represent high accuracy up to short circuit levels.

They can be used in protection and measurement purposes with very wide operating range. This technology ensures easier maintenance thanks to very low voltage values present on the secondary side.

### ... and simplicity

Solutions bring significant simplification during project execution stage.

Simpler engineering (no CT sizing), procurement, stocking (very less variants) and installation ensures high effectiveness and improves the project delivery time.

*LPCT TLP130 - 0,72 kV insulation*

*LPVT GIS type C - 24 kV insulation*

---

The Easergy P3 Standard protection relay has been developed to meet your standard protection needs for building, distribution utilities, and industrial applications. Thanks to its optimized and flexible design, the Easergy P3 Standard provides an excellent solution for various protection applications.

The user-friendly Easergy P3 Standard brings greater efficiency to your operations by enabling rapid ordering, configuration, and operations for an unparalleled digital experience

## Easergy P3 Standard at a glance

### Universal

- All-in-one box with feeder, transformer, and motor protections
- All communication protocols embedded on serial and Ethernet links including IEC 61850 ed.1 and ed. 2

### Robust

- Best-in class reliability based on 100+ years of experience in Sepam, MiCOM and Vamp relays
- Strong tests performed in international laboratories
- Compliant to IEC electro-mechanical standards
- Designed for demanding industrial conditions with conformal-coated printed circuit boards

### Efficient and connected

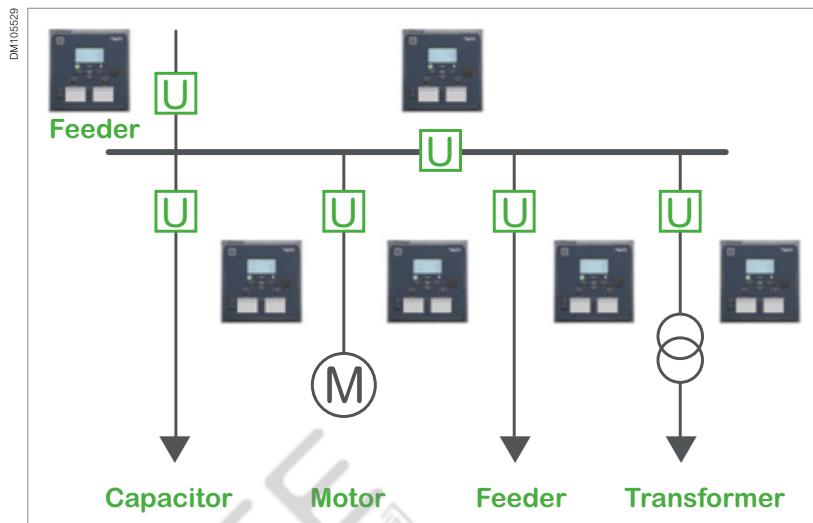

- Easy to order with 10 standard configurations delivered off the shelf in less than 7 days (location dependent)
- Easy to configure with the unique eSetup Easergy Pro setting software
- Easy to test with the virtual simulation test for direct injection of current and voltage from eSetup Easergy Pro
- Easy to install with withdrawable rear connectors with CT shortening
- Easy to use and maintain with the embedded web-HMI and EcoStruxure™ Power Device app for direct access on site via your laptop, smartphone, or tablet.

# Presentation

Easergy P3 is designed to cover all the standard applications with only one device: the Universal Protection.

Easergy P3 Standard is available **in 3 models:**

Model	Communication	Main advantages
<b>Easergy P3U10</b> • 4 CT / 1VT • 2 DI / 5 DO / WD	Stand-alone device, without communication ports	<b>Simplicity</b> , while allowing the latest features, like single-line diagrams (mimics), programmable protection stages, logics and function keys
<b>Easergy P3U20</b> • 4 CT / 1VT • 10 DI / 5 DO / WD • 8 DI / 8 DO / WD	Open communication protocols on serial or Ethernet links, with IEC 61850	<b>Openness to IEC 61850</b> , while keeping the core functionalities of Easergy P3 Standard relay
<b>Easergy P3U30</b> • 4 CT / 4VT • 16 DI / 8 DO / WD • 14 DI / 11 DO / WD	Open communication protocols on serial or Ethernet links, with IEC 61850	<b>Wide scope of possibilities</b> , with the directional protection, synchro-check, fault location, and increased number of input and outputs

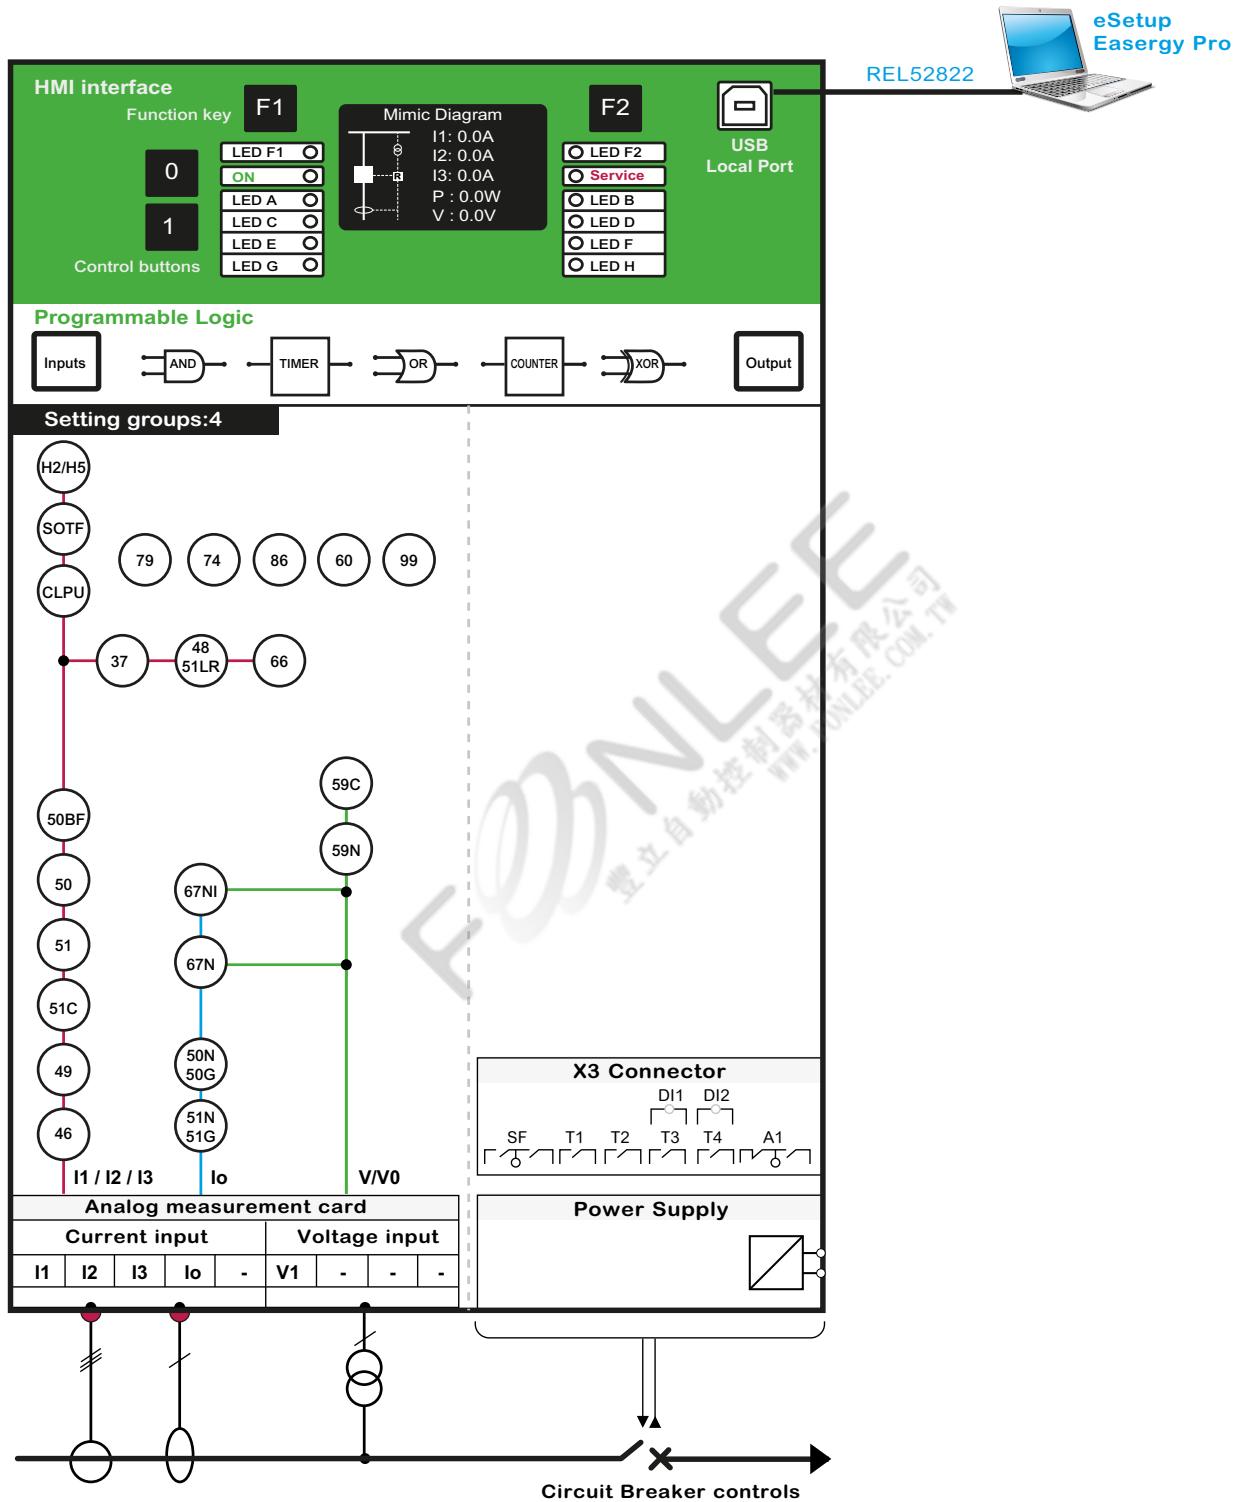

**A common set of functions** extends the possibilities of protection and control:

- Single-line diagrams (mimic) in the display
- Programmable protection stages
- Programmable logics
- 2 programmable function keys
- Synchro-check function
- Direct-access USB port
- Up to 6 objects controlled

## Local HMI

Single-line diagram of the power system

### Comprehensive data for fast and easier operation

All the data required for a local equipment operation may be displayed on demand:

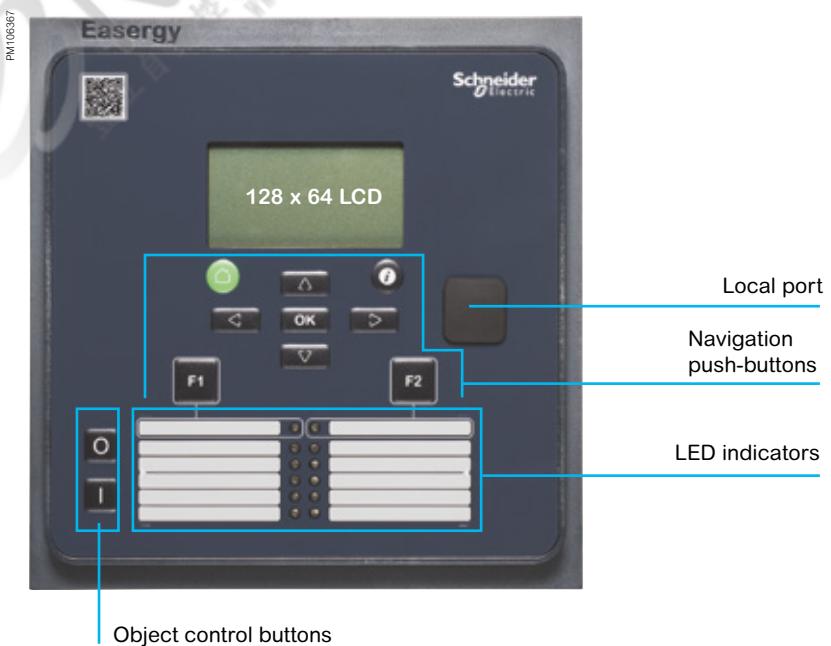

- Display the single-line diagram and freely assignable analog values
- Display of all measurements
- Display of operation and alarm messages
- Display and setting of all parameters
- Entry of password to protect parameter and protection settings

### Ergonomic data presentation

- Keypad keys identified by pictograms for intuitive navigation
- Graphical 128x64 LCD screen to display any character or symbol
- Excellent display quality under all lighting conditions
- Control buttons (0/1) to operate the circuit breaker and/or other controlled object
- 8 freely programmable LEDs to identify easily the message showed
- Labels are printed on a transparent film allowing customization of the relay
- Programmable function key (F1 / F2)

#### Front panel: Control and push-buttons

	INFO push-button for viewing additional information, entering the password view, and adjusting the LCD contrast
	Programmable function push-button
	Programmable function push-button
	ENTER push-button for activating or confirming a function
	UP navigation push-button for moving up in the menu or increasing a numerical value
	DOWN navigation push-button for moving down in the menu or decreasing a numerical value
	LEFT navigation push-button for moving backwards in a parallel menu or selecting a digit in a numerical value
	RIGHT navigation push-button for moving forwards in a parallel menu or selecting a digit in a numerical value
	Circuit breaker OFF push-button
	Circuit breaker ON push-button
	HOME/CANCEL push-button for returning to the previous menu. To return to the first menu item in the main menu, press the button for at least three seconds

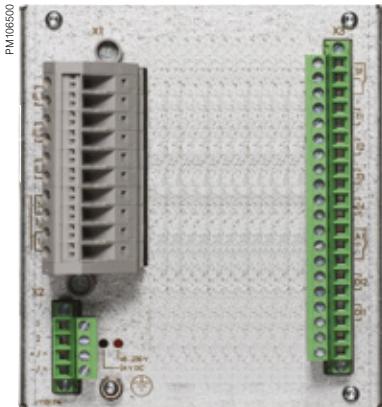

### Working language

All the texts and messages displayed on the Easergy P3U are available in two languages at the same time. Consult us for availability.

Cold	EN / IEC 60068-2-1, Ab	-40°C (-40°F)

### Environmental conditions

Ambient temperature, in-service	-40 – 60°C (-40 – 140°F)
Ambient temperature, storage	-40 – 70°C (-40 – 158°F)
Relative air humidity	< 95%, no condensation allowed
Maximum operating altitude	2000 m (6561.68 ft)

### Safety

	Standard and test class/level	Test value
<b>Electrical safety tests</b>		
Impulse voltage withstand	IEC/EN 60255-27	5 kV, 1.2/50 µs, 0.5 J 1 kV, 1.2/50 µs, 0.5 J Communication
Dielectric test	IEC/EN 60255-27	2 kV, 50 Hz 0.5 kV, 50 Hz Communication
Insulation resistance	IEC/EN 60255-27	
Protective bonding resistance	IEC/EN 60255-27	
Clearance and creepage distance	Design criteria for distances as per IEC 60255-27 Annex C (pollution degree 2, overvoltage category 3)	
Power supply burden	IEC 60255-1	

Easergy P3 Standard can be connected to networks, thus providing access to the following type of data:

- Events
- Status information
- Measurements
- Control commands
- Clock synchronizing
- Settings  
(SPA-bus and embedded SPA-bus only)

EcoStruxure™ Power Device app.

## Main protocols

Easergy P3 Standard can be connected directly to serial and/or Ethernet protocols with two different protocols at the same time, selected by eSetup Easergy Pro software.

### Communication protocols:

\*Need external accessories to connect.

Easergy web-HMI

## Redundancy protocols (RSTP or PRP)

When the devices are connecting in Ethernet link and demand for higher availability, Easergy P3 Standard can use Rapid Spanning Tree Protocol (RSTP) or Parallel Redundancy Protocol (PRP) to recover from a network failure.

## Easergy P3 web-HMI

A webserver is available in Easergy P3 Standard to get information from the device to monitor all data, send commands, and change protection settings.

# Programmable stages

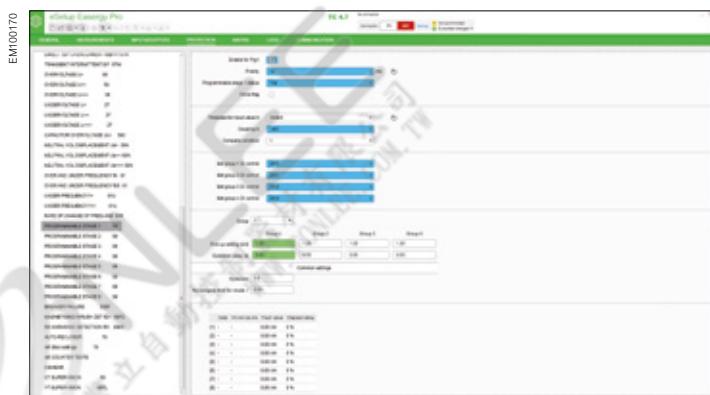

## Programmable protection function

## Personalize your protection function

Easergy P3 Standard allows you to create or personalize the protection function when you need to achieve specific levels of protection.

There are now eight stages available to use with various applications. Each stage can monitor any analog (measured or calculated) signal and issue start and trip signals. Programmable stages extend the protection functionality of the manager series to a new level. The Programmable stage has the possibility of comparing two freely selectable signals between each other. Using this feature you can create a comparison function using the relay's own measured or calculated signals. One or both of the signals can be connected to the comparison function over GOOSE.

For example, if four stages of frequency are not enough, it is possible to reach a maximum of 12 using programmable stages. Other examples include using the stages to issue an alarm when there are too many harmonics (THD) or indicating reverse power condition by GOOSE.

With Easergy P3 Standard, you get intuitive functionality to protect your electrical network system.

Main CB functions are:

- Trip circuit supervision (ANSI 74)
- CT/VT supervision (ANSI 60/60FL)
- Latching (ANSI 86)
- CB close/open order
- Number of operations
- Cumulative breaking current
- Personalized functions

## Maximize circuit breaker control

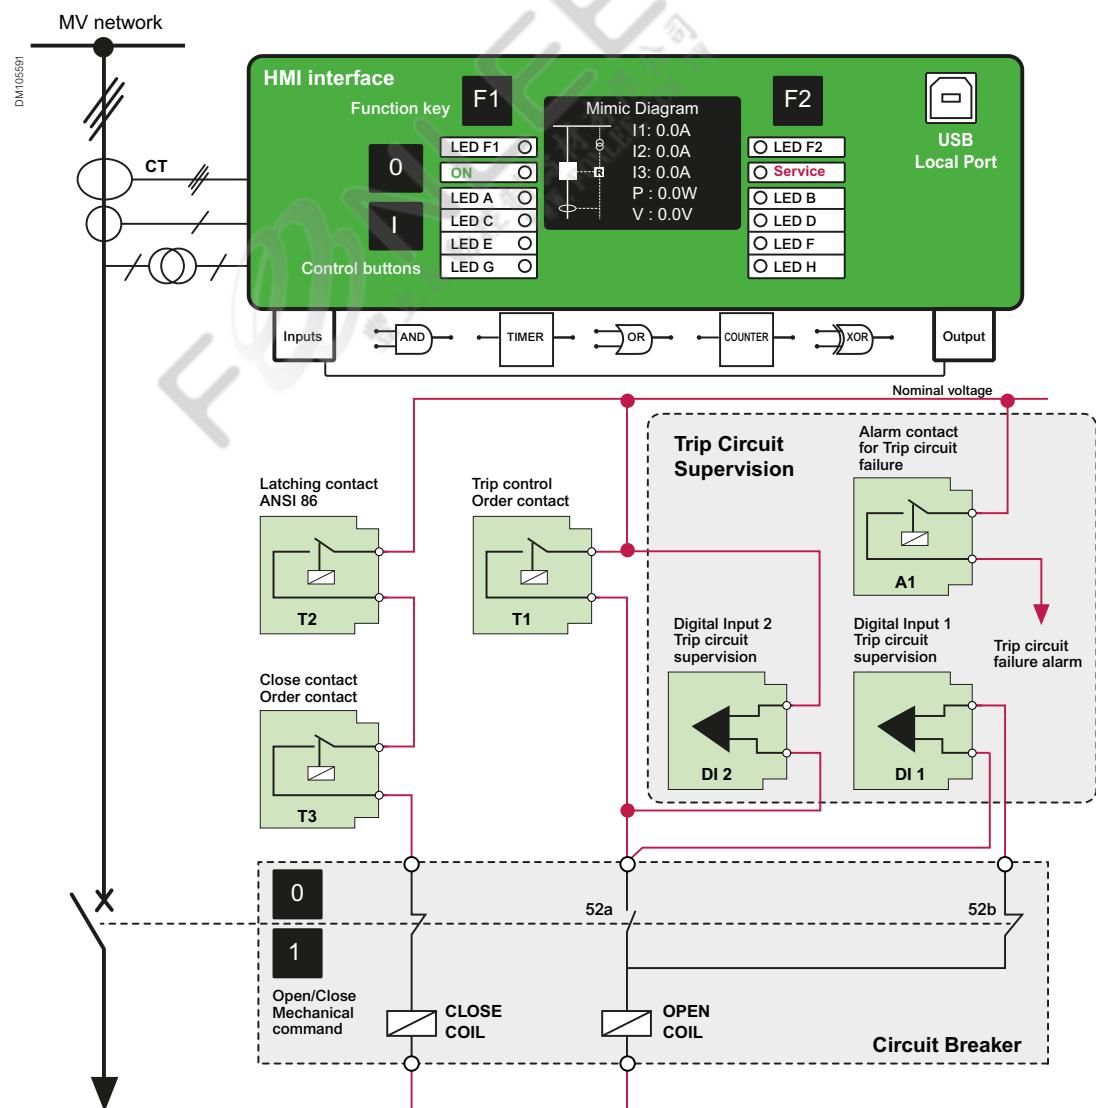

Easergy P3 Standard is a simple protection relay with a single-line diagram with control buttons (open and close), two personalized function keys, and eight configurable single-color LEDs in P3 Standard and fourteen tricolor LEDs in P3 advanced.

You can manage the control without external or additional component.

### Example of implementation

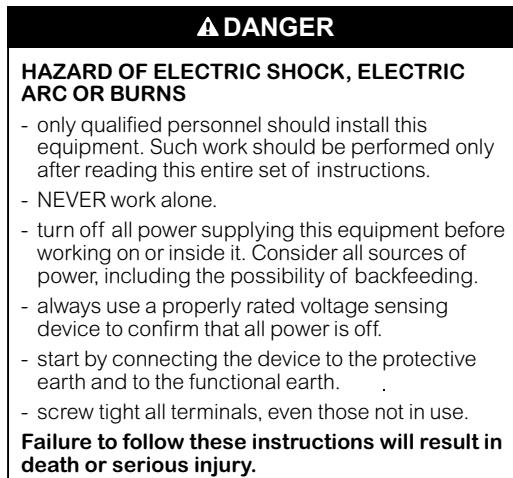

The schematic is structured for typical use in MV switchgears, 100% adapted for your use case. You are free to change the internal logic to adapt the Easergy P3 Standard to follow your needs.

If a problem occurs, clear and concise information allows users to make the right decisions at the right time.

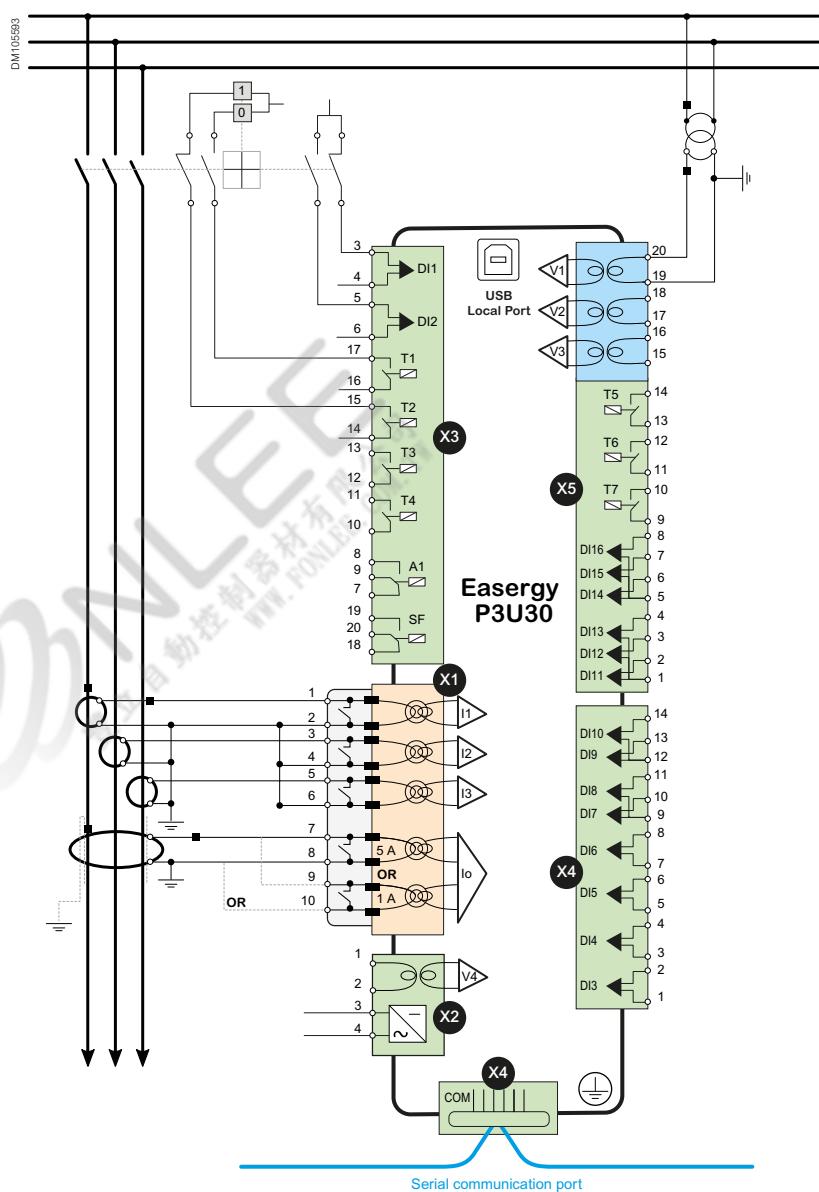

# Connection diagrams

## Easergy P3U30 example

Application with 3 phase CTs, 1 earth CT, 1 VT and CB control

Note: Dangerous environment, make sure to read the all information, including warning instructions (left).

# Connection diagrams

## Easergy P3U30 example

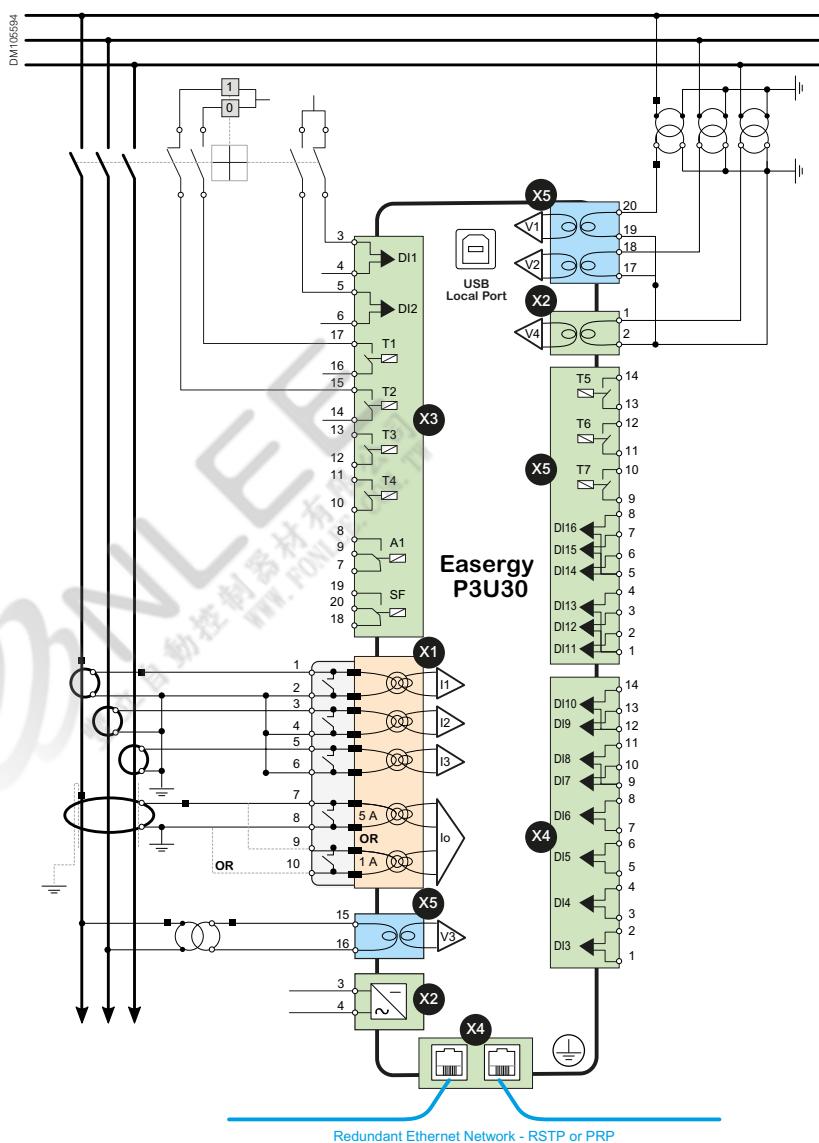

### **DANGER**

#### HAZARD OF ELECTRIC SHOCK, ELECTRIC ARC OR BURNS

- only qualified personnel should install this equipment. Such work should be performed only after reading this entire set of instructions.
- NEVER work alone.
- turn off all power supplying this equipment before working on or inside it. Consider all sources of power, including the possibility of backfeeding.
- always use a properly rated voltage sensing device to confirm that all power is off.
- start by connecting the device to the protective earth and to the functional earth.
- screw tight all terminals, even those not in use.

**Failure to follow these instructions will result in death or serious injury.**

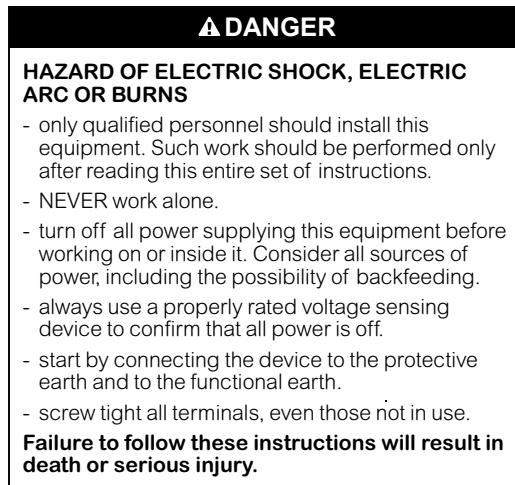

Application with 3 phase CTs, 1 earth CT, 3 VTs, synchro-check and CB control

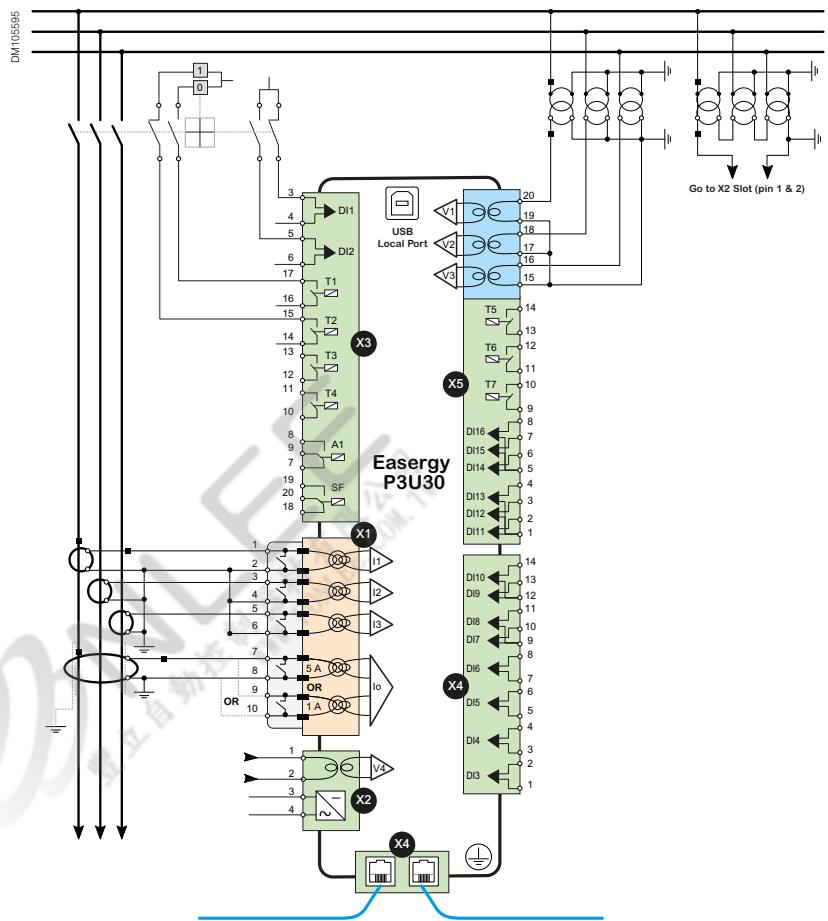

Note: Dangerous environment, make sure to read the all information, including warning instructions (left).

---

The Easergy P3 advanced is a protection relay developed to satisfy the protection needs for buildings, distribution utilities, and industrial applications. Thanks to a wide scope of functionality and Ethernet communication, Easergy P3 advanced provides a cost-effective solution for the upper end of protection requirements in these applications.

Protect your staff and equipment and ensure safer operations with Easergy P3 Advanced's built-in arc flash detection and protection functions.

You will experience greater operational efficiency with rapid ordering, configuration, and operations for an unparalleled digital experience provided with Easergy P3.

## Easergy P3 Advanced at a glance

### Extended capabilities

- Extended protection functions, including differential of line, transformer, motor, and generator
- Arc flash detection
- All communication protocols embedded on serial and Ethernet links, including IEC 61850 ed.1 and ed. 2
- Increased number of inputs and outputs

### Robust

- Best-in class reliability based on 100+ years of experience in Sepam, MiCOM and Vamp relays
- Strong tests performed in international laboratories
- Compliant with IEC electro-mechanical standards

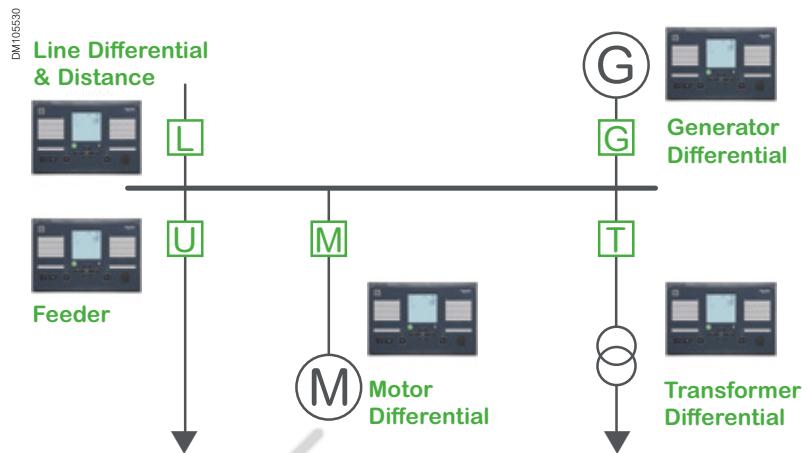

### Efficient and connected

- Easy to configure with the unique eSetup Easergy Pro setting software
- Easy to test with the virtual simulation test for direct injection of current and voltage from eSetup Easergy Pro
- Easy to use and maintain with the embedded web-HMI and EcoStruxure™ Power Device app for direct access on site via your laptop, smartphone, or tablet

# Presentation

Easergy P3 is designed to cover a large scope of applications

Easergy P3 Advanced is designed in **7 models, per application:**

Model	Function	
Easergy P3F 30	Feeder	Protection
Easergy P3L 30	Line	Differential and Distance
Easergy P3M 30 32	Motor	Protection
		Differential
Easergy P3G 30 32	Generator	Protection
		Differential
Easergy P3T 32	Transformer	Differential

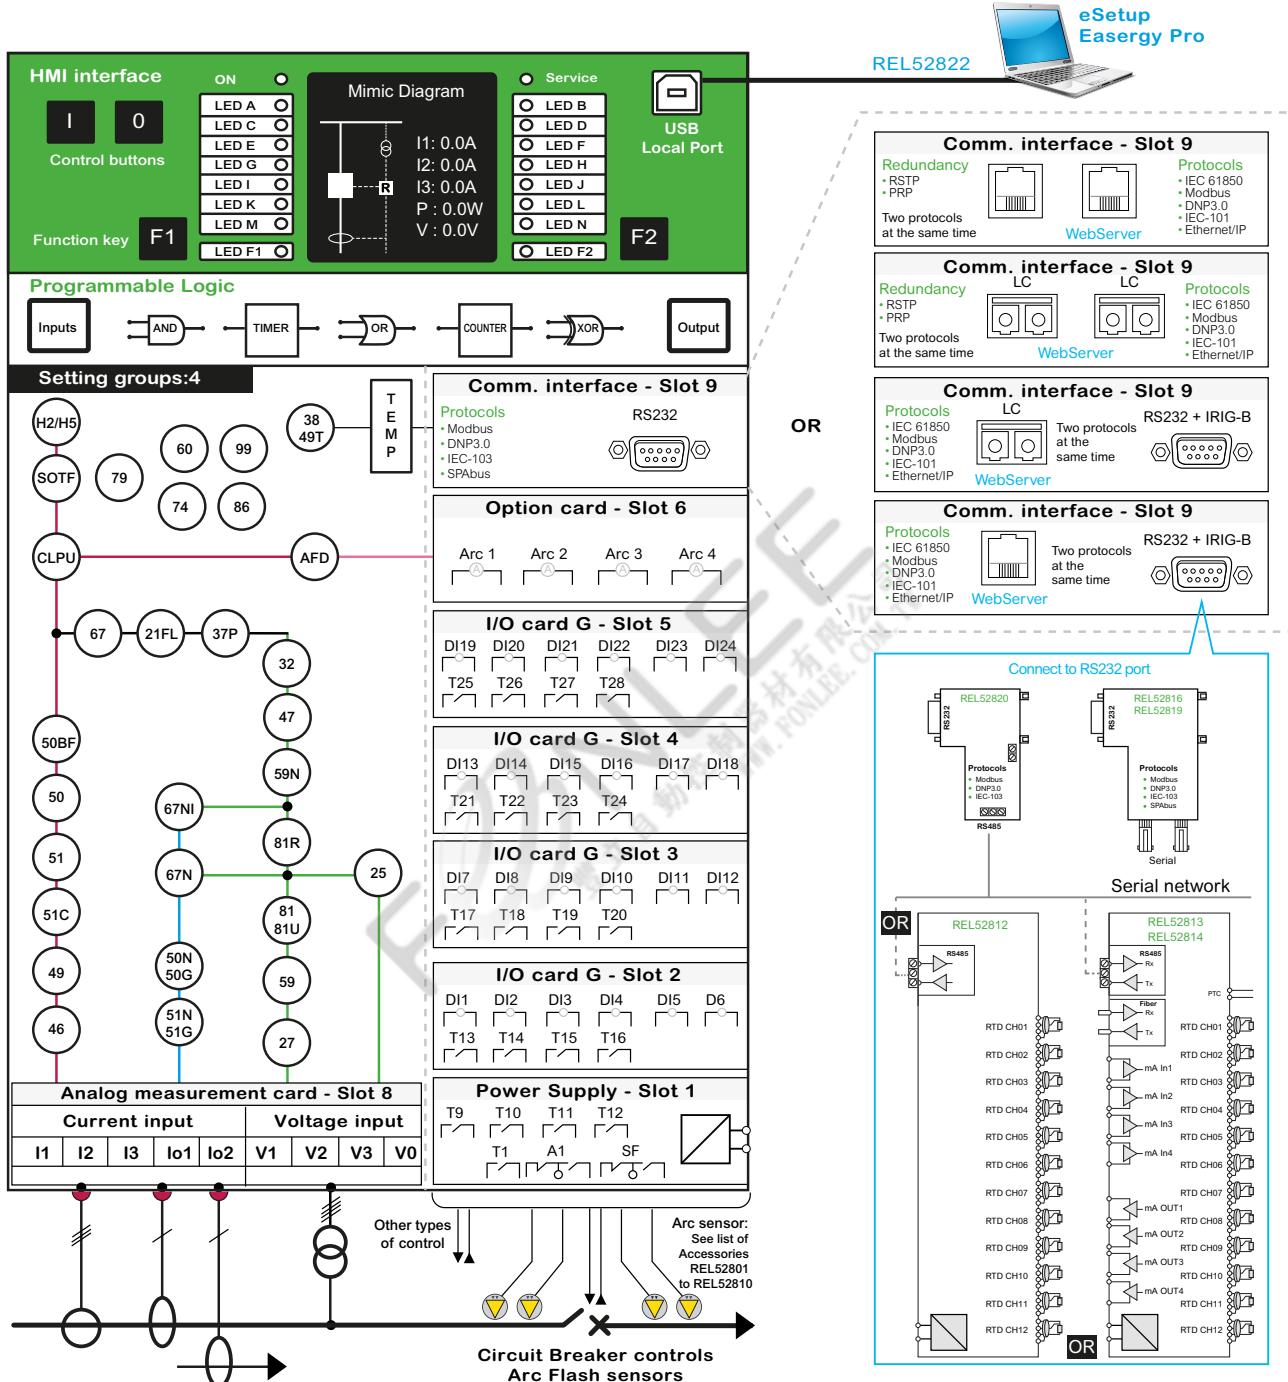

A common set of functions extends the possibilities of protection and control:

- Single-line diagrams (mimic) in the display
- Programmable protection stages
- Programmable logics
- 2 programmable function keys
- Synchro-check function
- Direct-access USB port
- Up to 6 objects controlled
- Arc flash protection

# Base unit presentation

## Integrated arc flash protection

Easergy P3 Advanced measures fault current, and with arc protection, also light via arc sensor channels that provide monitoring for the whole switchgear.

An arc flash is a mass of heat and pressure caused by a switchgear fault. It not only causes power outages but can also result in loss of business and extensive material damage. If an arc fault occurs in the switchgear, the arc protection system prevents the fault from spreading by tripping the circuit breaker within less than 10 ms.

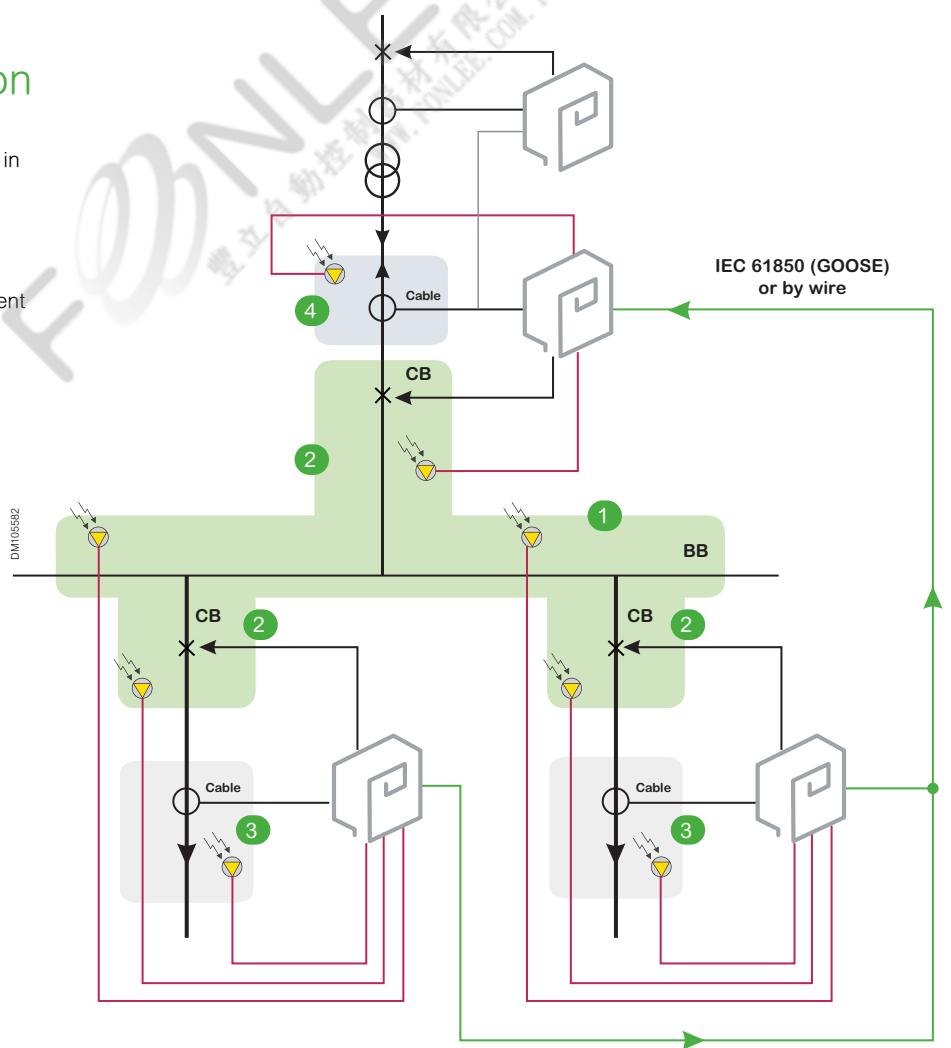

Easergy P3 Advanced relays can connect up to four arc flash sensors that have continuous self-supervision to check the sensor status.

## Example of application

The four arc flash sensors can be installed in specific parts of the switchgear:

1. Busbars compartment
2. Circuit breaker compartment
3. Current/voltage transformers compartment
4. Cables connections compartment

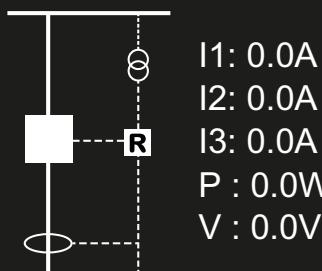

# Base unit presentation

## Local HMI

DM105603

### Mimic Diagram

*Single line diagram of the power system*

### Comprehensive data for easier and faster operation

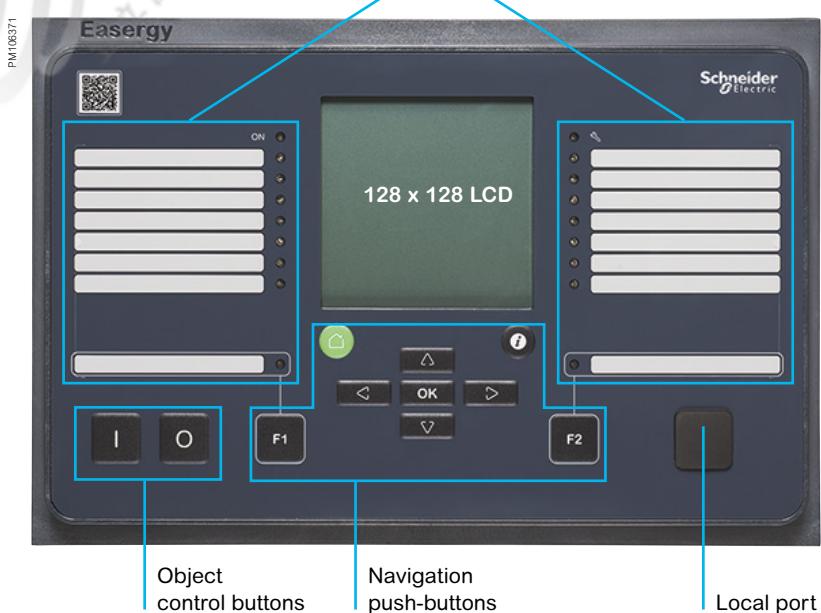

All the data you require for a local equipment operation can be displayed on demand:

- Display the single line diagram and freely assignable analog values
- Display of all measurements
- Display of operation and alarm messages
- Display and setting of all parameters
- Password entry to protect parameter and protection settings

### Ergonomic data presentation

- Keypad keys identified by pictograms for intuitive navigation
- Graphical 128x128 LCD screen displays any character or symbol
- Excellent display quality under all lighting conditions
- Control buttons (0/1) to operate the circuit breaker and/or others controlled object
- 14 freely programmable LEDs with 3 different colors (red, orange and green) to identify easily the message shown
- Labels are printed on a transparent film allowing customisation of the relay
- 2 programmable function keys (F1 / F2)

	INFO push-button for viewing additional information, entering the password view, and adjusting the LCD contrast
	Programmable function push-button
	Programmable function push-button
	ENTER push-button for activating or confirming a function
	UP navigation push-button for moving up in the menu or increasing a numerical value
	DOWN navigation push-button for moving down in the menu or decreasing a numerical value
	LEFT navigation push-button for moving backwards in a parallel menu or selecting a digit in a numerical value
	RIGHT navigation push-button for moving forwards in a parallel menu or selecting a digit in a numerical value
	Circuit Breaker OFF push-button
	Circuit Breaker ON push-button
	HOME/CANCEL push-button for returning to the previous menu. To return to the first menu item in the main menu, press the button for at least three seconds

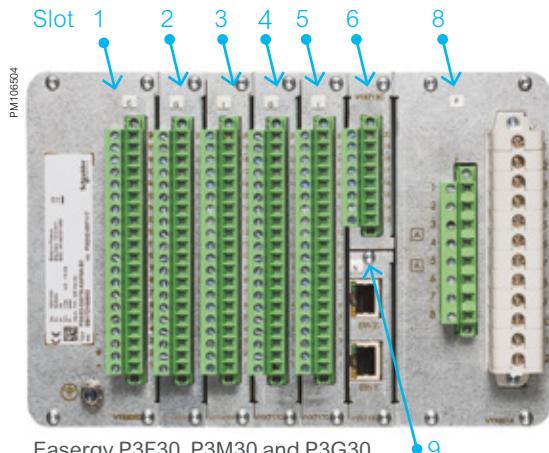

### Working language

All the texts and messages displayed on the Easergy P3 Advanced are available in two languages at the same time.

## Rear panel

### Digital input and output capability

The Easergy P3 Advanced has a modular concept in term of digital inputs and outputs.

#### Description of the optional boards

**C** = 5 x DO heavy duty, A1, SF

**D** = 5 x DO heavy duty, A1, SF

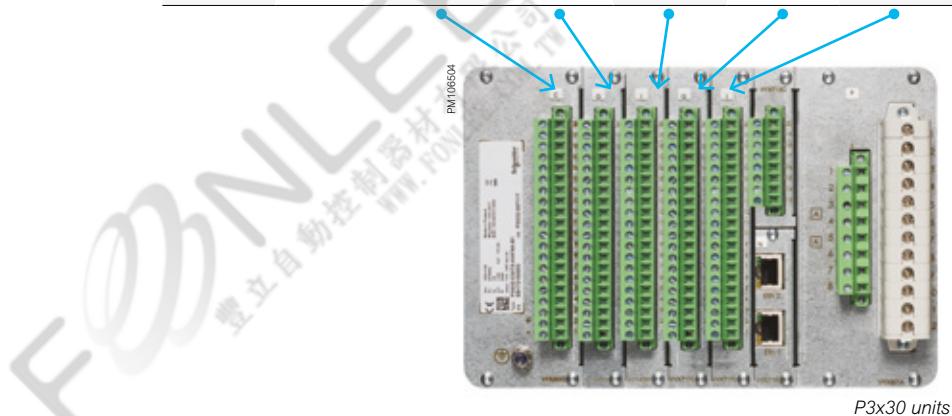

**A** = None

**G** = 6DI+4DO (6 x DI, 4 x DO)

**H** = 6DI+4DO (6 x DI, 4 x DO(NC))

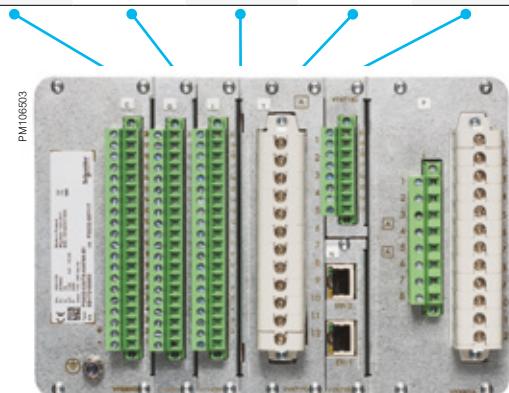

**I** = 10DI (10 x DI)

Number of		Type of I/O card – P3X30				
Input	Output	Slot 1	Slot 2	Slot 3	Slot 4	Slot 5
6	11	C/D	G	None	None	None
12	15	C/D	G	G or H	None	None
18	19	C/D	G	G or H	G or H	None
24	23	C/D	G	G or H	G or H	G or H
22	16	C/D	G	G or H	I	None
32	16	C/D	G	G or H	I	I
28	19	C/D	G	G or H	G or H	I
16	11	C/D	G	I	None	None
26	11	C/D	G	I	I	None
36	11	C/D	G	I	I	I

P3x30 units

Number of		Type of I/O card – P3X32				
Input	Output	Slot 1	Slot 2	Slot 3	Slot 4	Slot 5

12	15	C/D	G	G or H	None	None
16	11	C/D	G	I	None	None

P3x32 units

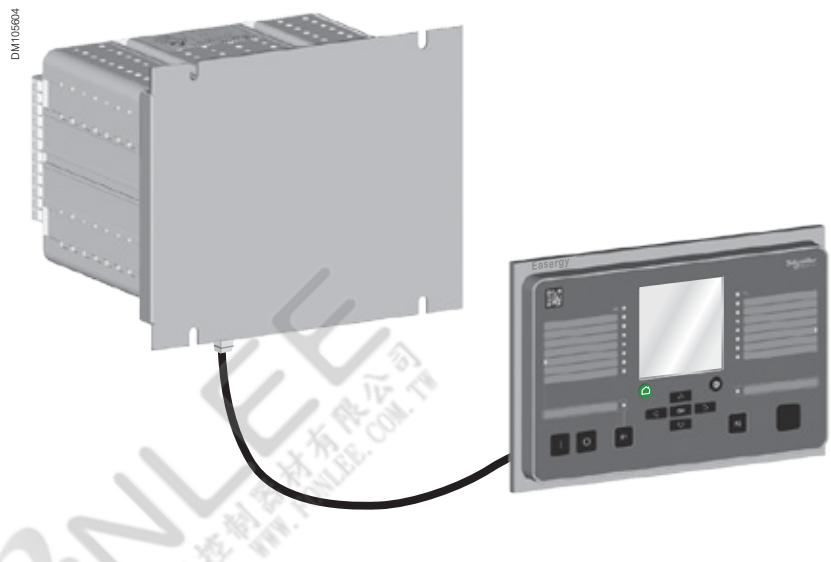

The slots 4 and 5 are used to receive the analog current input when Easergy P3 is used with differential overcurrent (ANSI 87).

# Base unit presentation

## Remote HMI

This mounting technique allows for a lighter door because the relay's frame is installed in the back of the secondary compartment. Communication, DI, and DO cabling is easier, too, as the door movement does not need to be considered.

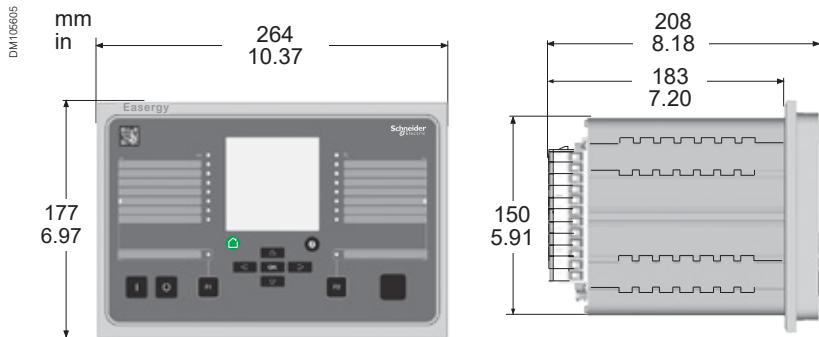

In this case, only the communication between IED base and display has to be wired.

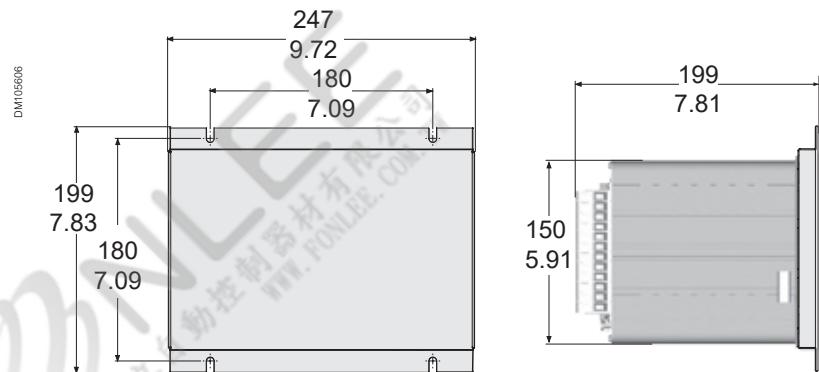

# Base unit dimensions

## Dimensions

### Conventional HMI

### Remote HMI

#### Weight (maximum)

Easergy P3 Advanced      4.2 Kg (9.272 lb) or higher (depends of options)

#### Degree of protection (IEC 60529)

IP54 Front panel / IP20 Rear side

# Base unit dimensions

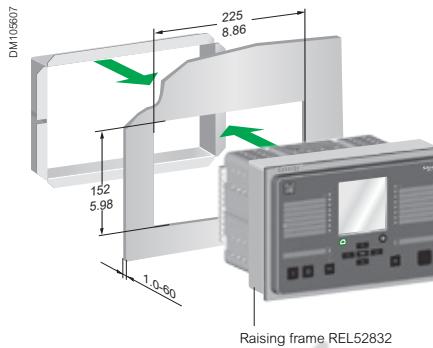

## Cut-out and mounting

Cut-out accuracy must be complied with to ensure good withstand.

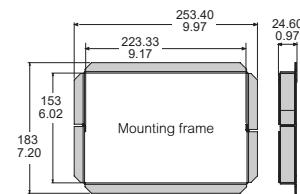

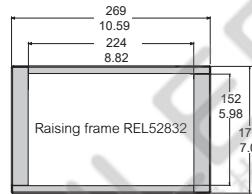

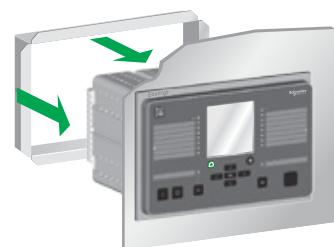

## Mounting

In case the depth dimension behind the compartment door is limited, the IED can be equipped with a frame (REL52832) around the collar. This arrangement reduces the depth inside the compartment by 45 mm (1.77 in).

### Projection mounting with the raising frame REL52832

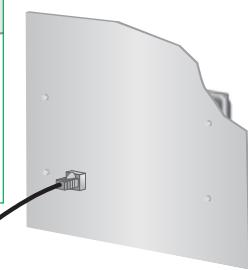

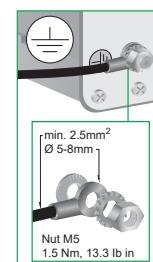

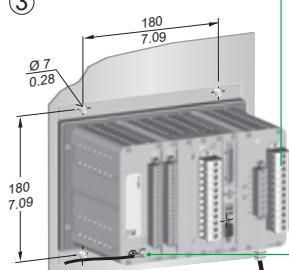

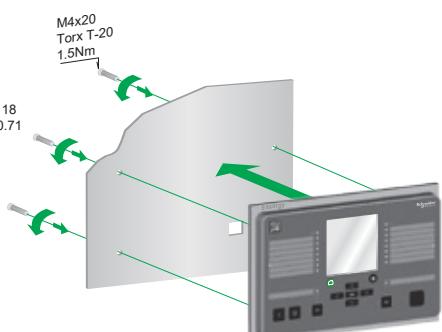

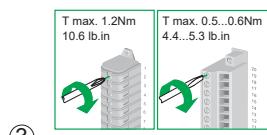

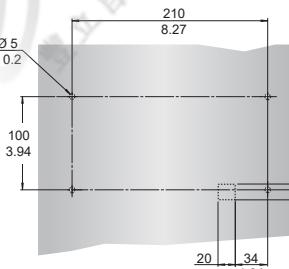

### Panel mounting

## Wall mounting with remote HMI

Dry heat	EN / IEC 60068-2-2, Bb	70°C (158°F)
Cold	EN / IEC 60068-2-1, Ab	-40°C (-40°F)

### Environmental conditions

Ambient temperature, in-service	-40°C – 60°C (-40°F – 140°F) <sup>(1)</sup>
Ambient temperature, storage	-40°C – 70°C (-40°F – 158°F)
Relative air humidity	< 95%, no condensation allowed
Maximum operating altitude	2000 m (6561.68 ft)

(1) with 1 x raising frame -> maximum ambient temperature 55°C (+131°F)  
with 2 x raising frame -> maximum ambient temperature 50°C (+122°F)

# Communication

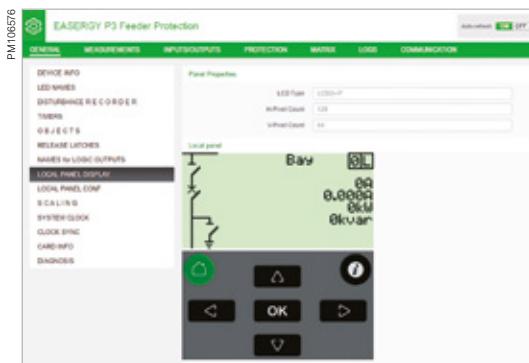

## Communication protocols

Easergy P3 Advanced can be connected to networks, providing access to the following type of data:

- Events
- Status information
- Measurements
- Control commands
- Clock synchronizing
- Settings  
(SPA-bus and embedded SPA-bus only)

EcoStruxure™ Power Device app

Easergy P3 web-HMI

## Main Protocols

Easergy P3 Advanced can be connected directly to serial and/or Ethernet protocols with two different protocols at the same time, selected by eSetup Easergy Pro software.

### Communication protocols:

Serial protocols - RS232 / RS485 / serial Fiber Optic (*) port
Modbus RTU
DNP3.0
IEC 60870-5-101
IEC 60870-5-103
ProfibusDP (*)
SPA-Bus (*)
Ethernet protocols - RJ45 / LC port
IEC61850 ed1 & ed2
Modbus TCP
IEC60870-5-101
DNP3.0
Ethernet IP

### Communication ports:

<b>Comm. interface - Slot 9</b>	<b>Protocols</b>
Redundancy	RSTP PRP
Two protocols at the same time	WebServer
<b>Comm. interface - Slot 9</b>	<b>Protocols</b>
LC	IEC 61850 Modbus DNP3.0 IEC-101 Ethernet/IP
Two protocols at the same time	RS232 + IRIG-B
<b>Comm. interface - Slot 9</b>	<b>Protocols</b>
Redundancy	RSTP PRP
Two protocols at the same time	WebServer
<b>Comm. interface - Slot 9</b>	<b>Protocols</b>
LC	IEC 61850 Modbus DNP3.0 IEC-101 Ethernet/IP
Two protocols at the same time	RS232 + IRIG-B
<b>Comm. interface - Slot 9</b>	<b>Protocols</b>
Redundancy	RSTP PRP
Two protocols at the same time	WebServer
<b>Comm. interface - Slot 9</b>	<b>Protocols</b>
RS232	IEC 61850 Modbus DNP3.0 IEC-101 SPA-Bus

\*Need external accessories to connect.

## Redundancy protocols (RSTP or PRP)

When the devices are connecting in Ethernet link and demand for higher availability, Easergy P3 Advanced can use Rapid Spanning Tree Protocol (RSTP) or Parallel Redundancy Protocol (PRP) to recover from a network failure.

## Easergy P3 web-HMI

A webserver is available in all Easergy P3 Advanced to get information from the device to monitoring all data, send command and change protection setting.

# Programmable stages

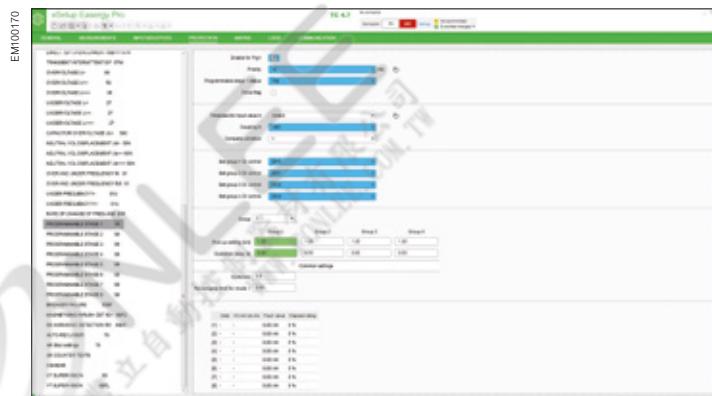

## Programmable protection function

### Personalize your protection function

Easergy P3 Standard enables you to create or personalize the protection function when you need to achieve specific levels of protection.

There are now eight stages available to use with various applications. Each stage can monitor any analog (measured or calculated) signal and issue start and trip signals. Programmable stages extend the protection functionality of the manager series to a new level. The Programmable stage has the possibility of comparing two freely selectable signals between each other. Using this feature you can create a comparison function using the relay's own measured or calculated signals. One or both of the signals can be connected to the comparison function over GOOSE.

For example, if four stages of frequency are not enough, it is possible to reach a maximum of 12 using programmable stages. Other examples include using the stages to issue an alarm when there are too many harmonics (THD) or indicating reverse power condition by GOOSE.

# Circuit breaker control

With Easergy P3 Advanced, you get intuitive functionality to protect your electrical network system.

Main CB functions are:

- Trip circuit supervision (ANSI 74)
- CT/VT supervision (ANSI 60/60FL)
- Latching (ANSI 86)
- CB close/open order
- Number of operations
- Circuit breaker operating time
- Charging time
- Cumulative breaking current
- Personalized functions

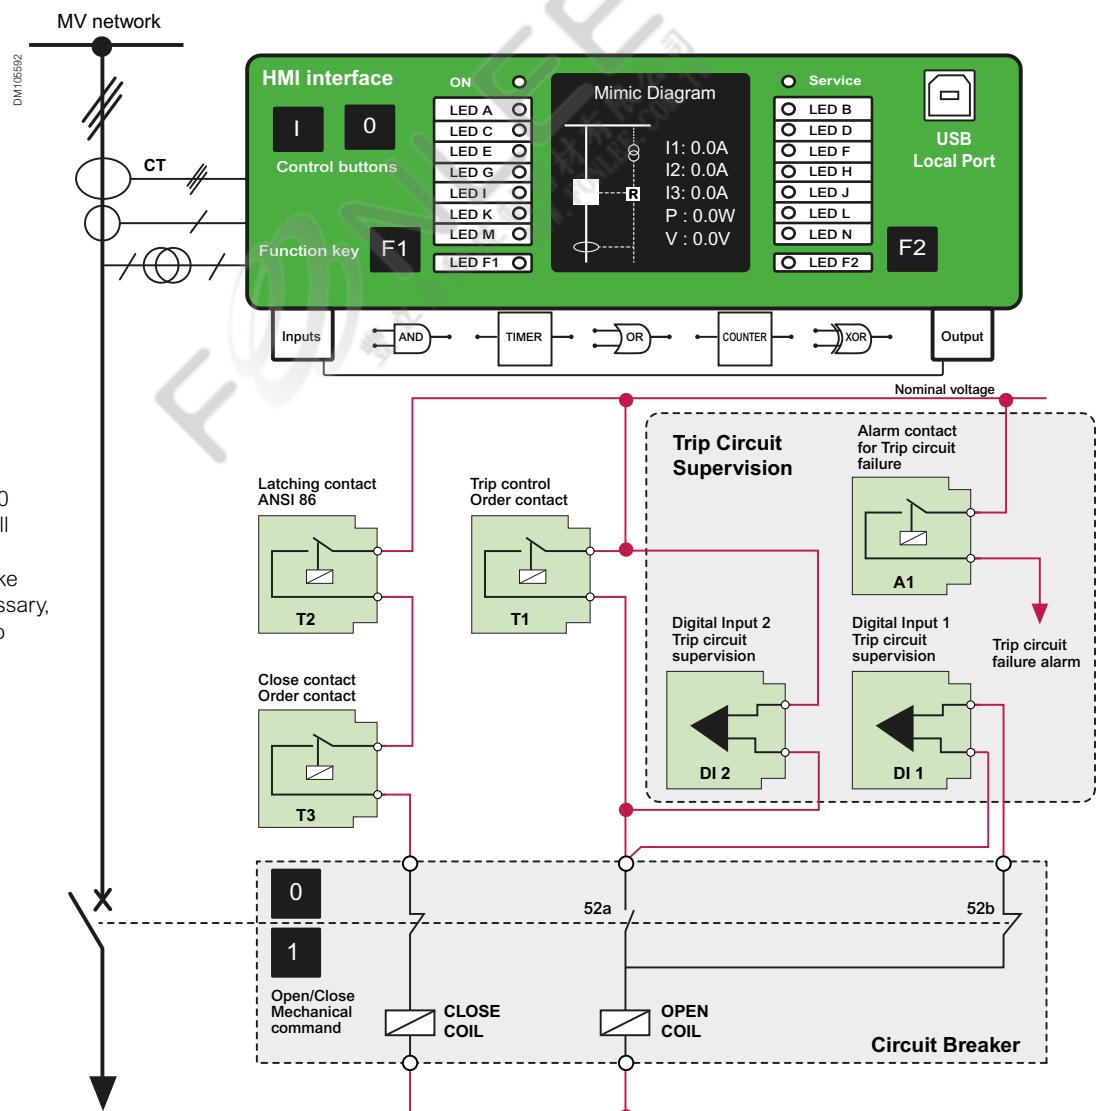

## Maximize circuit breaker control

Easergy P3 Advanced is the simplest protection relay with mimic diagram with control buttons (open and close), two personalized function keys and 14 configurable bicolor LEDs. You can manage the control without external or additional components.

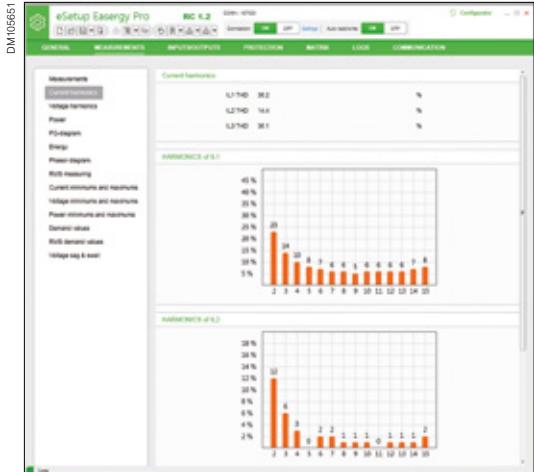

### Example of implementation

The schematic is structured for typical use in MV switchgear, 100% adapted for your use case. You can change the internal logic to adapt the Easergy P3 to meet your needs.

If a problem occurs, clear and concise information allows users to make the right decisions at the right time.

# Power quality measurements

## Power quality

The power quality of electrical networks has become increasingly important in modern society. Sophisticated loads, such as computers and automation systems, require an uninterrupted supply of "clean" electricity. Easergy P3 Advanced provides integrated power quality measuring and analysis functions, which help to reduce variations in the quality of the distributed power. The terminal supervises the harmonics of phase currents and voltages from the 2nd to the 15th order and the THD (total harmonic distortion)..

One of the most important power quality functions is the monitoring of voltage sags and swells. Easergy P3 Advanced provides separate monitoring logs for sags and swells. The fault log comprises four registers for voltage sags and another four for voltage swells.

The disturbance recorder functionality can be used for recording measured currents and voltages and for recording status information of digital inputs and outputs, also including the signals of the arc protection system. The time stamped recordings provide indispensable information for the subsequent analysis of a fault situation.

### Example of harmonics content and voltage sag/swell registration (obtained from an Easergy P3 Advanced protection relay)

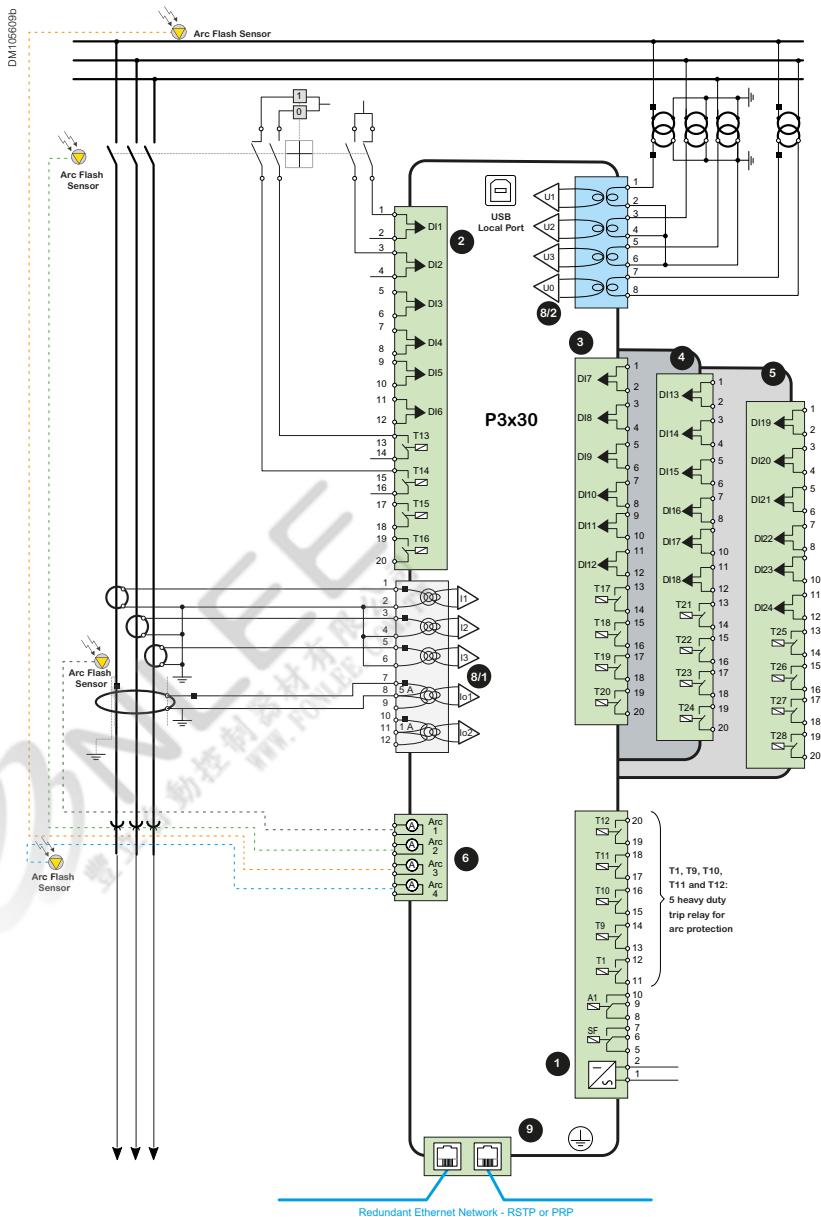

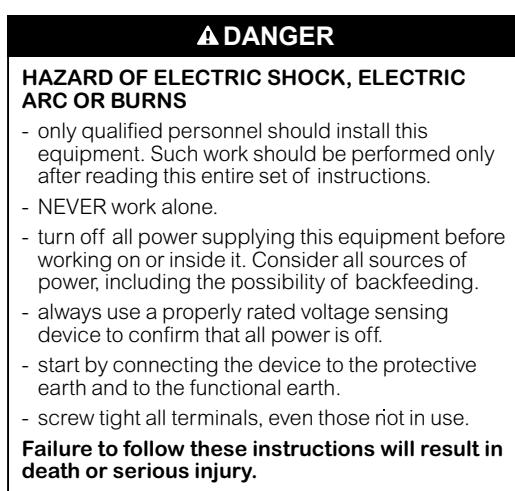

Many functions in modern society rely heavily on electrical energy, so the quality of the energy supply is gaining increased importance.

#### Power Quality data in Easergy P3 Advanced

THD of IL1, IL2 and IL3	Total harmonic distortion of phase currents
H of IL1, IL2 and IL3	Harmonics phase current up to 15th
THD of U	Total harmonic distortion of phase to phase or phase to ground voltages
H of U	Harmonic of phase to phase or phase to ground voltage up to 15th
Sag and swell	
Voltage interruptions

## Presentation

### Minimum requirements for running eSetup Easergy Pro:

- Windows 7 or higher
- 512 MB RAM
- 50 MB Disk space

### eSetup Easergy Pro

eSetup Easergy Pro offers full facilities to set up Easergy relays. Intuitive and simple, eSetup Easergy Pro is a user-oriented interface to assist you during the engineering, commissioning and operation of Easergy protection relays.

It's streamlined workflow and graphical representations has been designed to smooth your configuration process.

The software is available for download on the Schneider Electric website.

Use eSetup Easergy Pro in standalone mode during engineering to prepare the configuration.

Connect the PC running eSetup Easergy Pro to the USB port of the Easergy protection relay during commissioning to adjust the settings and test the relay.

Connect the PC running eSetup Easergy Pro to the Ethernet network during operation to retrieve data from the relays and update the system.

*For connection to Easergy P3, use the REL52822 connection cord*

# Easergy P3 software

## Presentation

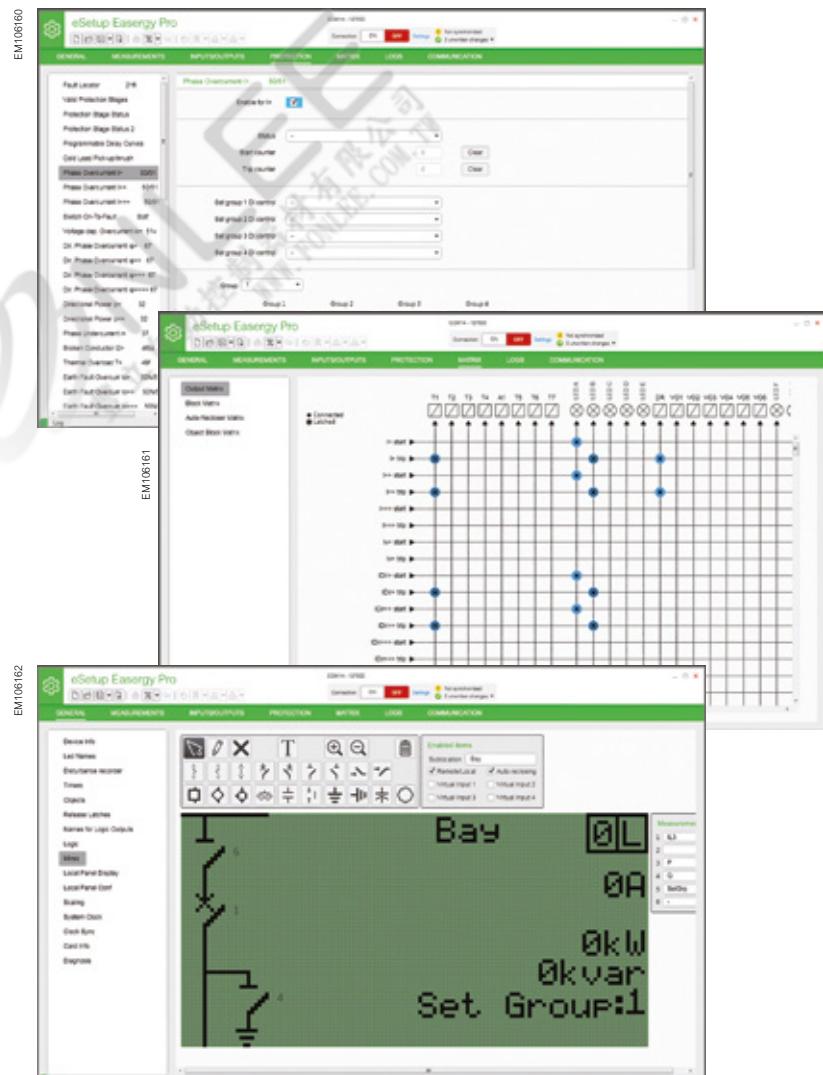

eSetup Easergy Pro at each step of the digital life

# eSetup Easergy Pro

## During engineering

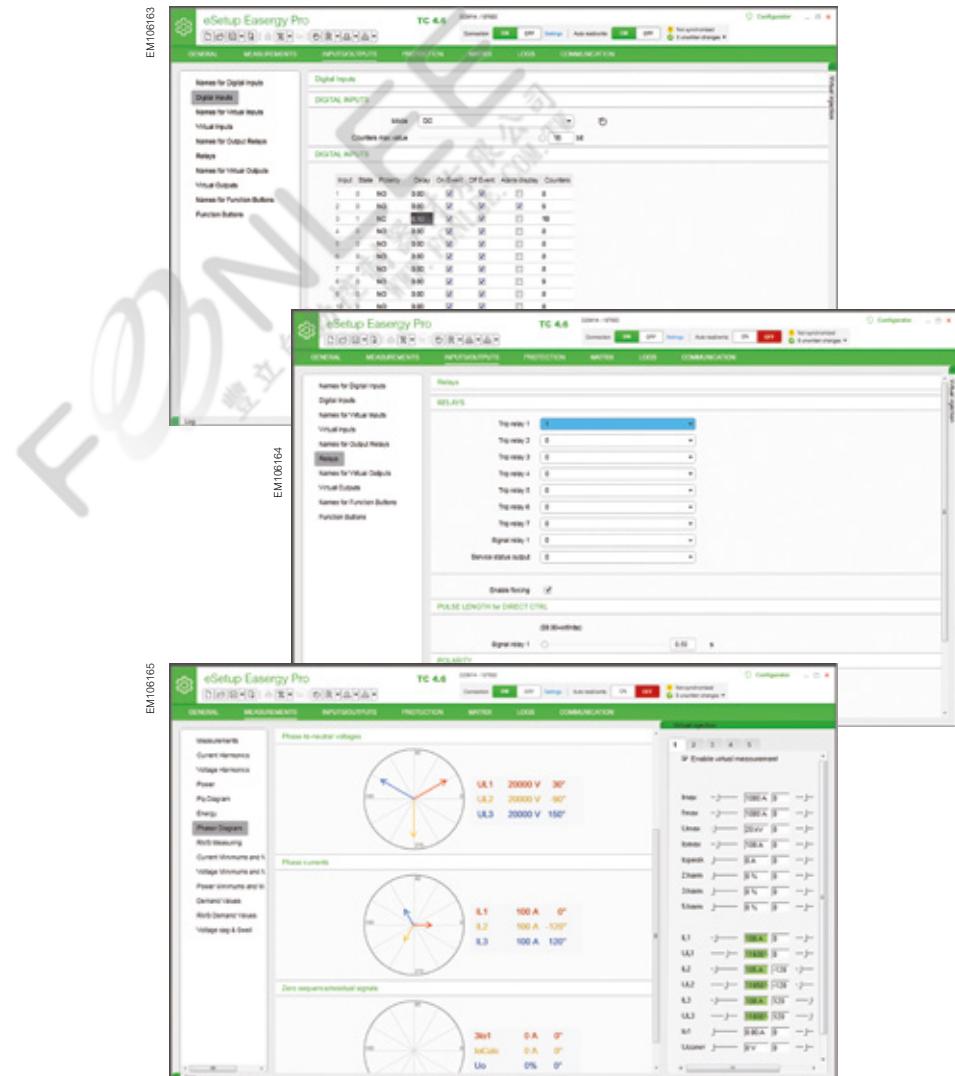

- Create the configuration of the Easergy P3 relay: select the appropriate options and receive the order code
- Set the characteristics of the CTs, VTs, or sensors connected to the relay, and select the protection functions that will be activated and their settings
- Build a specific logic, if required, using a graphic editor
- Map the digital inputs of the relay and different internal signals to the relevant functions, LEDs, and digital outputs, using a straightforward matrix format
- Draw the single-line diagram that will appear on the front display of the relay for switchgear control and select the measurements that will be displayed. If any, build the interlocking logic using a matrix format
- For IEC 61850 protocol, configure the data set and the report control blocks that will be published and select the GOOSE data to which you want to subscribe
- Complete the setting of additional functions (disturbance recorder, event logging system, clock synchronization, etc.).

# eSetup Easergy Pro

## During commissioning

- Connect to the front panel of one single relay or access several relays by connecting to Ethernet
- Open the Digital Inputs menu to check the status of inputs. Reverse the polarity or add a filtering delay if necessary
- Open the Relays menu and force the status change of the output relays in order to check the wiring.
- Open the Phasor Diagram menu to see in real time the phasor of injected currents and voltages and the value
- Use virtual injection for testing protection settings and circuit breaker tripping and for checking LEDs and connected outputs
- Open the Logic or the Matrix menu if the logic needs to be tested. The active signals appear in a different color and are updated in real time. Changes in the logic or in the matrix can be made and applied to the relay smoothly.

# eSetup Easergy Pro

## During operation

- Connect to the front panel of a single relay or gain access to several relays by connecting to Ethernet
- During normal operation, get the most of the metering capabilities of the Easergy protection relay:
  - Open the different Measurements menus to access the power monitoring and power quality data.
  - Open the disturbance recorder menu to get a waveform capture or program the recording of a power trend.
- After a trip, use eSetup Easergy Pro to understand the fault:
  - Check the fault log of the protection that has tripped the circuit breaker
  - Download the disturbance record from the Easergy P3 and display it with a disturbance recorder evaluation tool, eg. Wavewin.

# Easergy web-HMI

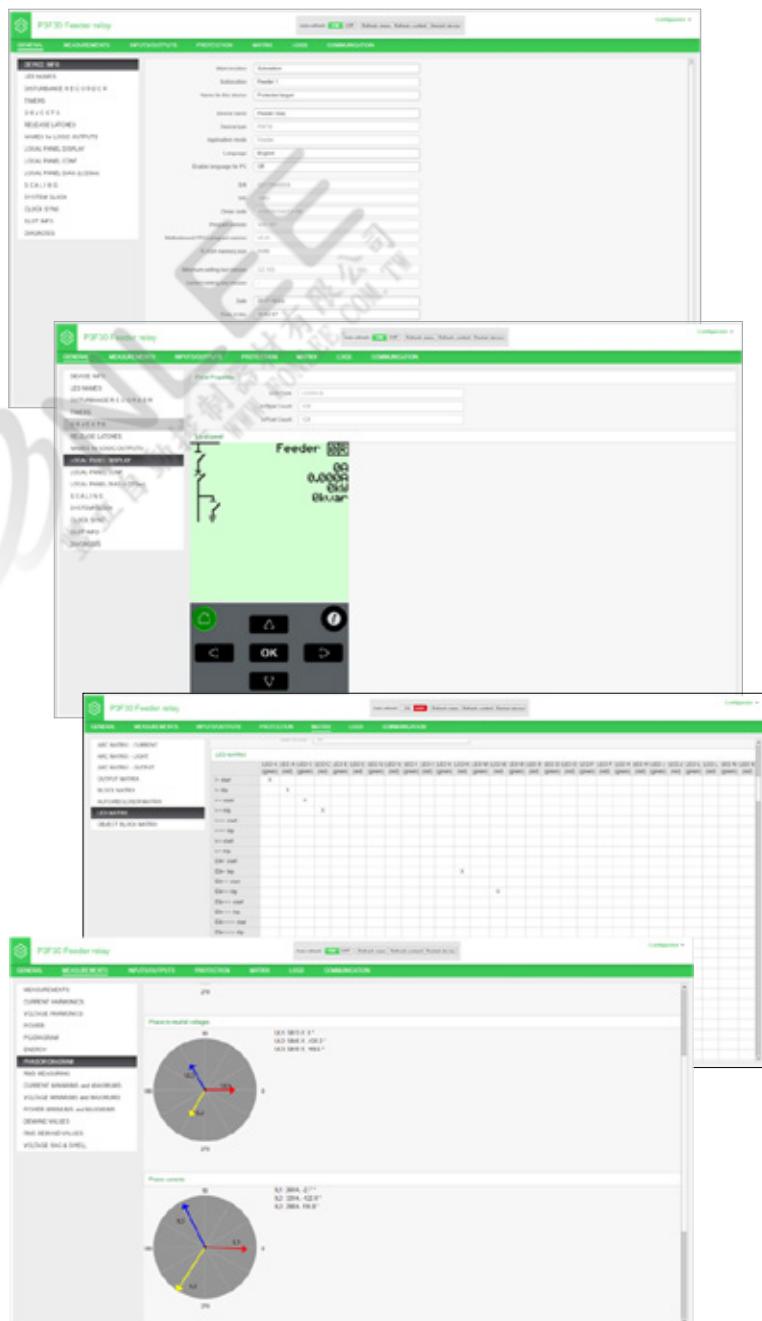

## Description

### Enhance operational efficiency

- Direct access to protection and communication settings
- Control and monitoring of circuit breakers and switches
- Mirror HMI function
- Direct access to measurements including the graphic phasors
- Device diagnosis
- MATRIX status
- Access to logs and other information

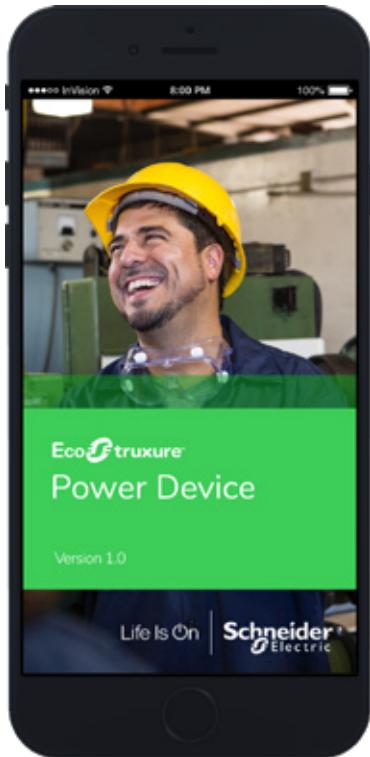

### Boost operational efficiency with the embedded web-HMI

Quickly and conveniently configure, monitor, and operate your Easergy P3 protection relay with our web-HMI. The web-HMI, accessible online via IP address of the relay, doesn't require you to install specific computer software - simply use your web browser to connect to the device. You only need to enable the web server service during the initial configuration of Easergy P3 with eSetup Easergy Pro. The web-HMI is based on the same page design as eSetup Easergy Pro, making it easy to use!

# Mobile application

## Description

### EcoStruxure™ Power Device app

Within the palm of your hand you can be connected to your Schneider Electric:

- Masterpact MTZ air circuit breaker
- TeSys GV4 motor circuit breaker
- Easergy P3 protection relays
- ... and more!

EcoStruxure Power Device app is a single mobile application with necessary information and capabilities to operate and efficiently maintain devices in the EcoStruxure architecture.

This app can be installed on your IOS and Android smartphone. The protection devices can be identified on the app by simply scanning their QR codes.

Wireless communication is possible via by WIFI, Bluetooth, NFC technologies for operation and monitoring within the proximity of the devices. Get real time notifications about the electrical installation: load levels, health status, warnings and alarms, protection settings...and more!

All you need is an EcoStruxure™ Power Device mobile application loaded either your Android or IOS platforms and a Bluefer wireless adapter (REL52850). Plug the adapter cable on the front of the Easergy P3, mount the unit with a magnet touch next to the relay and establish the wireless communications. Having done this then you can access to the main functions of the Easergy P3, utilize a cloud-based storage for events, alarms and share the device information with colleagues.

## Description

### Cables for Easergy P3 Standard

The cables can be used for connecting external option modules to the Easergy P3 Standard. The device is equipped with I/O communication model E or F, where RS232 interface is available.

PM109869

**REL52825 (VX082)**

A remote port is available when a REL52825 cable is used. The cable contains a connector for the RS-232 interface of the Easergy P3 Standard and a D9-connector for the external option module.

Length	<b>2.5 m</b> (78.74 in)
--------	-------------------------

PM109890

**REL52827 (VX084)**

The cable contains a connector for the RS-232 interface of the Easergy P3 Standard and a D9-connector for the REL52815 Profibus interface module. An extension port is available for the REL52827 in Easergy P3 Standard.

Length	<b>3.0 m</b> (118.11 in)
--------	--------------------------

PM109870

**REL52826 (VX083)**

Remote and extension ports are available, in addition to IRIG-B clock synchronization, when the REL52826 cable is used. The REL52826 cable contains a connector for the RS-232 interface of the Easergy P3 Standard and a 3-piece D9-connector for the external option module and IRIG-B.

Length	<b>2.5 m</b> (78.74 in)
--------	-------------------------

# Connection cables

## Description

### Cables for Easergy P3 Advanced

The cables can be used for connecting external option modules to the Easergy P3 Advanced. The device is equipped with I/O communication model B, C or D, where RS232 interface is available.

#### REL52823 (VX067)

Remote and extension ports are available when the REL52823 cable is used. The REL52823 cable contains a connector for the RS232 interface of Easergy P3 Advanced and 2-piece D9-connector for the external option modules.

Length	<b>3.0 m (118.11 in)</b>
--------	--------------------------

#### REL52838 (VX086)

Remote and extension ports are available in addition to IRIG-B clock synchronization when the REL52838 cable is used. The REL52838 cable contains a connector for the RS232 interface of Easergy P3 Advanced and 3-piece D9-connector for the external option modules and IRIG-B.

Length	<b>3.0 m (118.11 in)</b>
--------	--------------------------

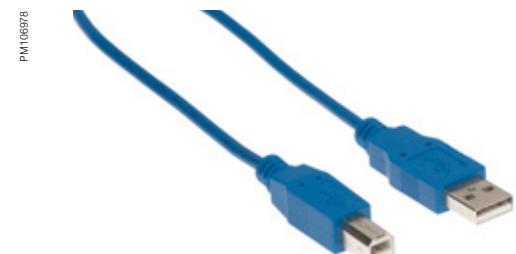

#### REL52824 (VX072)

The cable contains a connector for the RS232 interface of Easergy P3 Advanced and D9-connector for the REL52815 Profibus interface module. An extension port is available for the REL52824 in Easergy P3 Advanced.

Length	<b>3.0 m (118.11 in)</b>
--------	--------------------------

### Cables for all Easergy P3 models

#### Front face USB Cable - REL52822 (VX052-3)

The Easergy P3 protection relays have a USB-connector in the front panel. Use eSetup Easergy Pro setting software with USB cable to set the device.

Length	<b>3.0 m (118.11 in)</b>
--------	--------------------------

# Communication modules

## Network interface modules

PM106591

### RS232 to RS485 network – REL52820

The external RS485 interface REL52820 is used to connect Easergy P3 devices to the RS485 network. With the RS485 serial interface module it is possible to have following serial protocols in use.

#### Characteristics

Distance (maximum)	200 m (7,874.02 in)
Devices (maximum)	32
Type of fiber optic connector	PIN (3)
Type of RS232 connector	9-pin DSUB connector
RS485 type	2-wire
Serial protocols	Modbus, DNP3.0, IEC870-5-103 and SpaBus
Power supply	From RS232 port or external – 12Vdc

To connect the interface with:

Easergy P3 Standard devices, use REL52825 cable

Easergy P3 Advanced devices, use REL52823 cable if needed

PM106596

### RS232 to fiber optic network – REL52816 to REL52819

An external fiber optic interface is used to connect Easergy P3 devices to a fiber optic loop or a fiber optic star network. The options include two different types of serial fiber optic modules.

Characteristics	REL52819	REL52816
Distance (maximum)	30 m (1,181 in)	1,000 m (39,370 in)
Type of fiber optic	Plastic-Plastic	Glass-Glass
FO diameter	1 mm	62.5/125 $\mu$ M
Devices (maximum)	32	32
Type of fiber optic connector	HP Versalink Snap-in connector	ST
Interface	9-pin DSUB connector	
Serial protocols	Modbus, DNP3.0, IEC870-5-103 and SpaBus	
Power supply	From RS232 port or external – 12 Vdc	

To connect the interface with:

Easergy P3 Standard devices, use REL52825 cable

Easergy P3 Advanced devices, use REL52823 cable if needed

# Communication modules

## Network interface modules

PM106595

### Profibus network interface – REL52815

External Profibus interface REL52815 is used to connect Easergy P3 devices to the Profibus network.

#### Characteristics

Interface	9-pin DSUB connector (Female)
-----------	-------------------------------

Transfer method	RS485, Half-duplex
-----------------	--------------------

Transfer cable	Twisted pair (1 pair and shield)
----------------	----------------------------------

Electrical isolation	500 Vdc
----------------------	---------

Serial protocols	Profibus DP
------------------	-------------

Baud rate	9.6 kBaud to 12 Mbaud
-----------	-----------------------

#### Power supply

Easergy P3 Standard:	External – 12Vdc
----------------------	------------------

Easergy P3 Advanced:	From RS232 port or external – 12Vdc
----------------------	-------------------------------------

To connect the interface with:

Easergy P3 Standard devices, use REL52827 cable

Easergy P3 Advanced devices, use REL52824 cable

# Temperature and analog input/output modules

## For Easergy P3

The temperature module is supplied ready for operation with:

- Easergy P3U20, P3U30 with RS485 communication port direct
- Easergy P3U20, P3U30, and P3X3x with RS232 communication port by REL52820 external RS485 interface
- Easergy P3U20, P3U30, and P3X3x with RS232 communication port by REL52816 to REL52819 external fiber optic interface

## Function

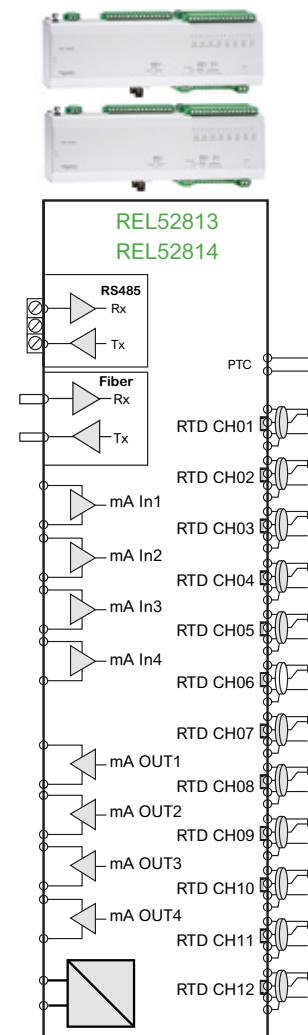

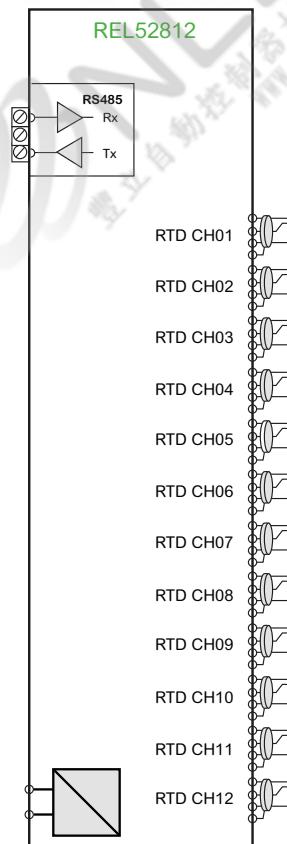

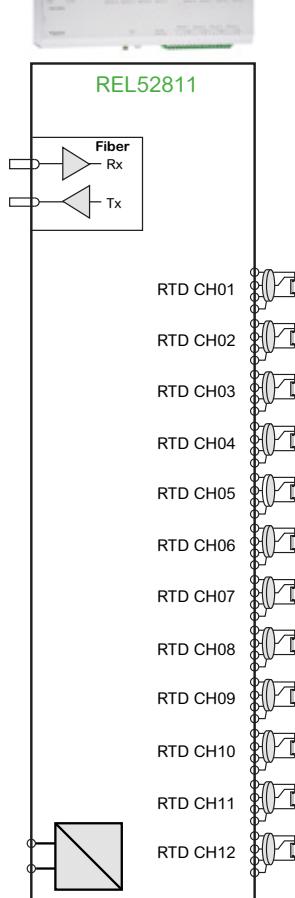

The temperature modules can be used to connect temperature sensors from the field to the Easergy P3 devices using a communication port RS485 by twist-pair or fiber optic.

The temperature measurement is utilized by the following protection functions in transformer and motor application:

- Thermal overload
- Temperature monitoring
- Customized logic or custom protection function

The modules REL52813 and REL52814 have analog input and output to use in the special controls functions.

DN105636

# Temperature and analog input/output modules

## For Easergy P3

### Temperature input modules – REL52811 / REL52812 / REL52813 / REL52814

Characteristics	REL52811	REL52812	REL52813	REL52814
Interface	Glass fiber (ST)	RS485 Twisted Pair		Glass fiber (ST) OR RS485,TP
Distance (maximum)	2,000 m (78,740 in)	1,200 m* (47,244 in)		2 000 m / 1 200 m*
Quantity of Temperature sensors	12 channels, 3-wire		12 channels, 3-wire and 1 PTC channel 2-wire	
Supported RTD types	Pt100, Ni00, Ni120 and Cu10			
Measuring range	1 - 400 Ω			
Measuring resolution	0.10 Ω			
Measuring accuracy	±0.3 Ω			
Sensor distance	50 Ω (corresponds to 2 000 m at 0.75 mm <sup>2</sup> )			
Power Supply	24 - 230 Vac/dc 50/60 Hz		24 Vdc	48 - 230 Vac/dc 50/60 Hz
Operating Temperature	0°C (32°F) to 55°C (131°F)			
Mounting Type	DIN Rail			
Degree of protection	IP20			

\* The value may decrease according to the conditions of use

### Analog Input / Output modules – REL52811 / REL52812 / REL52813 / REL52814

Characteristics	REL52811	REL52812	REL52813	REL52814
Analog Input (mA)	0	0	4	4
Input Range	-	-	0-25 mA	0-25 mA
Input accuracy	-	-	±1%	±1%
Input resolution	-	-	6uA (12-bits)	6uA (12-bits)
Input impedance	-	-	100 Ω	100 Ω
Analog Output (mA)	0	0	4	4
Output range	-	-	0-25 mA	0-25 mA
Output accuracy	-	-	±1%	±1%
Output resolution	-	-	6uA (12-bits)	6uA (12-bits)
Galvanic isolation	-	-	1000 V	1000 V
Max. Load/output	-	-	750 Ω	750 Ω
PTC Input	-	-	1	1
Measuring accuracy	-	-	±10% (<10 kΩ)	±10% (<10 kΩ)

\* The value may decrease according to the conditions of use

## LPVT & LPCT option

For Easergy P3 and Accessories

### LPCT / LPVT option in Easergy P3

#### LPCT inputs

Nominal current	2.5 A to 20 kA
Rated frequency	50 Hz or 60 Hz
LPCT rated nominal current	25, 50, 80, 100 A
LPCT rated primary current	10 A to 5 kA
LPCT rated secondary current	22.5 mV
Current factor	0.25; 0.50; 1.00; 1.25; 1.33; 2.00; 2.50; 3.20; 4.00; 5.00; 6.30; 6.66; 10; 16; 20; 25; 31.5
Dynamic	45 x nominal current
Protection nominal current	51–1600 A
Input impedance	2 MΩms / 500 pF
Thermal withstand	60 V

#### LPVT inputs

Nominal voltage	50 V – 500 kV
Rated frequency	50 Hz or 60 Hz
LPVT rated primary voltage	50 V – 500 kV
LPVT rated secondary voltage	3.25 V / √3
Voltage factor	0.25 to 1.5
Rated voltage	3.25 V / √3
Extender rated voltage	10 MΩms / 15 pF
Input impedance	0.25 to 1.5 rated voltage
Thermal withstand	25 V

# LPVT & LPCT option

## For Easergy P3 and Accessories

PM106130

PM106126

### LPVT hub connector

#### EMS59573: LPVT hub connector

The LPVT hub connector is a simple passive device that combines three LPVT signals coming from 3 different connectors into one single RJ45 connections.

The output of the LPVT hub connector is directly connected to the LPVT input of the Easergy P3 protection relay.

This accessory is indispensable when connecting Easergy P3 Protection relays to LPVTs.

#### Characteristics

Input voltage	< 10 V
Input voltage limits	< 30 V
Network frequency	50/60 Hz
Electrical connection	output: RJ45 connector inputs: 3 x RJ45 connectors
Dimension (L x W x H)	95 x 40 x 40 mm (3.74 x 1.57 x 1.57 in)
Weight	0.25 kg (0.55 lb)
Mounting support	DIN Rail
Operating altitude	≤ 3000 m (1.86 miles)

### Voltage adapter

#### EMS59572: Voltage adapter<sup>(1)</sup>

The voltage transformer adapter is made with 4 resistor bridges used to interface conventional voltage transformers (VTs) with the Easergy P3 protection relay equipped for LPCT/LPVT sensors.

#### Characteristics

Input voltage	50 Vac to 200 Vac (line-to-line)
Voltage max	600 V max permanent
Network frequency	50/60 Hz
Weight	0.15 kg (0.33 lb)
Mounting support	Symmetrical DIN Rail

<sup>(1)</sup> Contact us for availability

# Arc flash sensors

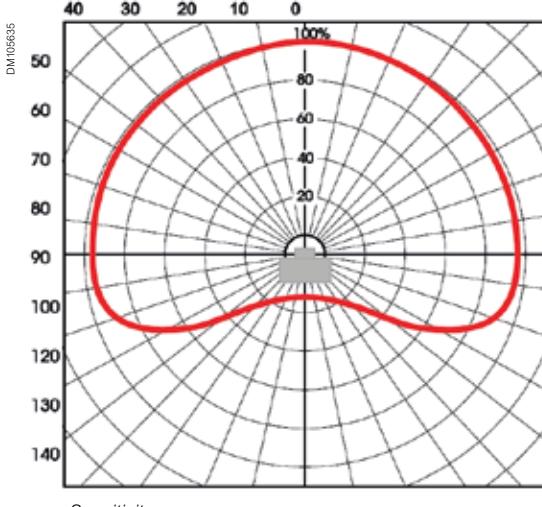

For Easergy P3 Advanced only

## Sensors description

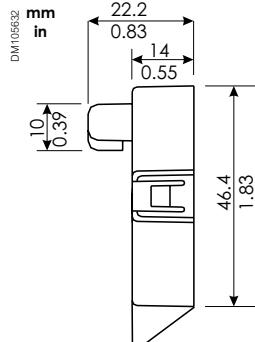

The sensor is used by an arc flash protection device (Easergy P3 Advanced) or system to detect the light coming from the arc flash incident.

The Easergy P3 Advanced arc sensor is activated by strong light. The sensor transforms the light information into the current signal, which is used by the protection device to indicate arc flash.

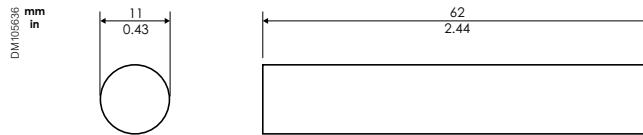

Arc flash sensors

# Greater peace of mind throughout your installation lifecycle

## How can you cut costs and improve performance at the same time?

When it comes to your electrical distribution infrastructure, the answer is straightforward: get professional expertise.

### Life cycle services

DIA08943

When it comes to your electrical distribution installation, we can help you:

- Increase productivity, reliability and safety
- Mitigate risk and limit downtime
- Keep equipment up to date and extend lifespan
- Cut cost and increase savings
- Improve your return on investment

### CONTACT US!

<https://www.schneider-electric.co.in/en/work/services/>

## Plan

Schneider Electric helps you plan the full design and execution of your solution, looking at how to make your process more dependable and optimize time:

- **Technical feasibility studies:** Design solution in your environment
- **Preliminary design:** Accelerate turnaround time to reach a final solution design.

## Install

Schneider Electric will help you to install more efficient, more reliable and safer solutions based on your plans.

- **Project management:** Complete your projects on time and within budget
- **Commissioning:** Ensure your actual performance versus design, through on-site testing and commissioning, and tools and procedures.

## Operate

Schneider Electric helps you maximize your installation uptime and control your capital expenditures through its services offering.

- **Asset operation solutions:** Provide the information you need to increase safety, enhance installation performance, and optimize asset maintenance and investment
- **Advantage service plans:** Customize service plans that include preventive, predictive and corrective maintenance
- **On-site maintenance services:** Deliver extensive knowledge and experience in electrical distribution maintenance
- **Spare parts management:** Ensures spare parts availability and optimized maintenance budget of your spare parts
- **Technical training:** Builds necessary skills and competencies to properly and safely operate your installations.

## Optimize

Schneider Electric proposes recommendations for improved safety, availability, reliability and quality.

- **MP4 electrical assessment:** Define an improvement and risk management program.

## Renew

Schneider Electric's end-of-life solutions may extend the life of your system while providing upgrades. Under specific service agreements, our service team can take full responsibility for the end-of-life processing of old electrical equipment:

- **Retrofit:** Keep up to date and improve the performance of electrical installations
- **MV product end-of-life:** Recycle and recover outdated equipment with end-of-life services.

# On-site condition maintenance with ProDiag MV Relay

DM07178

## Why carry out diagnostics?

Business competitiveness depends strongly on productivity, and productivity means uptime. On-site condition maintenance, with regular diagnostics, provides a long-term solution to avoid downtime.

### Why perform Easergy relay diagnostics with Schneider Electric?

Schneider Electric offers a complete range of maintenance services to provide you with the necessary level of maintenance for your Easergy devices. Having Schneider Electric at your side means our highly qualified personal can perform the right maintenance, while complying with manufacturer procedures and international services.

## Diagnosing protection relay tripping capability

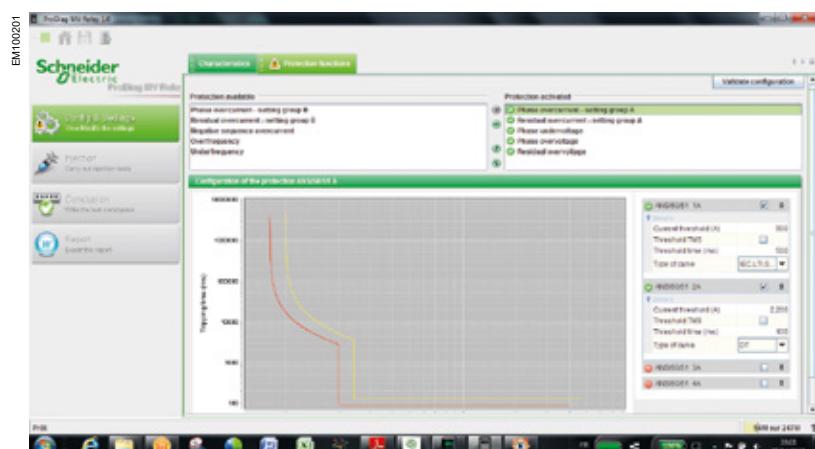

The **ProDiag MV Relay** diagnostic solution should be used on MV protection relays that have not received any diagnostics within the last four years.

This diagnostic checks the protection relay's conformity against the original product specifications. This is done to highlight any problem (internal or external) to the goal of the protection scheme:

- Reducing risks by isolating hazardous segments of the network where an electrical fault has been detected
- Maintaining high energy availability to avoid a total power outage and costly downtime
- Maximizing uptime by performing in-depth analysis and de-energizing equipment only when absolutely necessary

ProDiag MV Relay's unique features:

- Automatic download of all protection relay settings through drivers in the ProDiag MV Relay manager
- Easy verification of modifications made to protection settings since the last visit
- Easy verification of MV Relay original technical specifications

### ProDiag MV Relay: Included in the extended 10-year warranty\*

The Easergy P3 extended 10-year warranty applies under the following conditions:

- The product is registered within 18 months. Simply use the "My Schneider" app to scan the QR code found on the front of your Easergy P3
- The ProDiag MV Relay diagnostic is performed every FOUR YEARS (when Easergy P3 is used under normal operating conditions)
- Any replaced or repaired products have the latest hardware and firmware versions, and are functionally compliant with the original product

\* Standard warranty 2 years.

Please check with your local Schneider Electric representative for extended warranty availability and conditions.

# Achieve higher sustainability with ECOFIT™ solutions

Modernizing and upgrading your medium voltage switchgear doesn't need to mean your existing infrastructure is destroyed.

Schneider Electric retrofit solutions, combined with proper switchgear maintenance helps you to improve the reliability of your installation while achieving higher sustainable performance with ECOFIT™ - a Green Premium™ service.

## A true extended life time with ECOFIT™

## Environmental information with Green Premium™ ecolabel

# Green Premium™

An industry leading portfolio of offers delivering sustainable value

More than 75% of our product sales offer superior transparency on the material content, regulatory information and environmental impact of our products:

- RoHS compliance
- REACh substance information
- Industry leading # of PEP's\*
- Circularity instructions

Discover what we mean by green  
Check your products!

The Green Premium program stands for our commitment to deliver customer valued sustainable performance. It has been upgraded with recognized environmental claims and extended to cover all offers including Products, Services and Solutions.

#### CO<sub>2</sub> and P&L impact through... Resource Performance

Green Premium brings improved resource efficiency throughout an asset's lifecycle. This includes efficient use of energy and natural resources, along with the minimization of CO<sub>2</sub> emissions.

#### Cost of ownership optimization through... Circular Performance

We're helping our customers optimize the total cost of ownership of their assets. To do this, we provide IoT-enabled solutions, as well as upgrade, repair, retrofit, and remanufacture services.

#### Peace of mind through... Well-being Performance

Green Premium products are RoHS and REACh compliant. We're going beyond regulatory compliance with step-by-step substitution of certain materials and substances from our products.

#### Improved sales through... Differentiation

Green Premium delivers strong value propositions through third-party labels and services. By collaborating with third-party organizations we can support our customers in meeting their sustainability goals such as green building certifications.

# TOOLS

## schneider-electric.com

This international web site allows you to access all the Schneider Electric solutions and product information via:

- Comprehensive descriptions
- Range datasheets
- A download area
- Product selectors

You can also access information dedicated to your business and contact your Schneider Electric country support.

The screenshot shows the Schneider Electric website homepage. At the top, there's a green header bar with the company logo and navigation links for Life & City, PRODUCTS, SOLUTIONS, SERVICES, SUPPORT, and ABOUT US. Below the header is a large banner featuring a person working on a laptop. The main content area is divided into several sections: 'Investors' (with a building image), 'Press' (with a city skyline image), 'Careers' (with two people working at a desk), 'Our Company' (with a stadium image), 'Solutions' (with images of industrial and residential buildings), and 'Sustainability' (with images of people working). Each section has a 'Read more' button.

## Web selector

This site allows you to access the Schneider Electric products in just two clicks via a comprehensive range of datasheets, with direct links to:

- Complete libraries: technical documents, catalogs, FAQs, brochures
- Selection guides from the e-catalog
- Product discovery sites and their animations

You will also find illustrated overviews, news to which you can subscribe, and a list of country contacts

## Training

Training allows you to acquire the expertise (installation design, work with power on, etc.) to increase efficiency and improve customer service.

The training catalog includes beginner's courses in electrical distribution, knowledge of MV and LV switchgear, operation and maintenance of installations, and design of LV installations to give a few examples.

## Notes
